

Notice of a public meeting of

Local Plan Working Group

- To:** Councillors Ayre (Chair), Carr (Vice-Chair), N Barnes, D'Agorne, Derbyshire, Lisle, Looker, Mercer, Orrell, Reid, Steward, Warters and Williams
- Date:** Thursday, 12 October 2017
- Time:** 5.30 pm
- Venue:** The George Hudson Board Room - 1st Floor West Offices (F045)

AGENDA

1. **Declarations of Interest**

At this point in the meeting, Members are asked to declare:

- any personal interests not included on the Register of Interests
- any prejudicial interests or
- any disclosable pecuniary interests

which they may have in respect of business on this agenda.

2. **Minutes** (Pages 1 - 6)

To approve and sign the minutes of the meeting of the Local Plan Working Group held on 27 June 2017.

3. Public Participation

At this point in the meeting, members of the public who have registered their wish to speak, regarding an item on the agenda or an issue within the remit of the Working Group, may do so. The deadline for registering is **5.00pm on Wednesday 11 October 2017**. To register, please contact the Democracy Officers for the meeting on the details at the foot of this agenda.

Filming or Recording Meetings

Please note this meeting may be filmed and webcast, or recorded, and that includes any registered speakers who have given permission. The broadcast can be viewed at: <http://www.york.gov.uk/webcasts> or, if recorded, this will be uploaded onto the Council's website following the meeting.

Residents are welcome to photograph, film or record Councillors and Officers at all meetings open to the press and public. This includes the use of social media reporting, i.e. tweeting. Anyone wishing to film, record or take photos at any public meeting should contact the Democracy Officers (whose contact details are at the foot of this agenda) in advance of the meeting.

The Council's protocol on Webcasting, Filming & Recording of Meetings ensures that these practices are carried out in a manner both respectful to the conduct of the meeting and all those present. It can be viewed at

https://www.york.gov.uk/downloads/file/11406/protocol_for_webcasting_filming_and_recording_of_council_meetings_20160809

4. Upper and Nether Poppleton Neighbourhood Plan (Pages 7 - 20)

The purpose of the report is to consider the results of the Upper and Nether Poppleton Neighbourhood Plan referendum. It asks Members to recommend to Executive to formally 'make' the Neighbourhood Plan and bring it into full legal force as part of the Development Plan for York.

5. Minerals and Waste Joint Plan - Submission (Pages 21 - 116)

The report provides an update on the outcomes of the consultation on the Addendum of Proposed Changes to the Minerals and Waste

Joint Plan and ask Members to recommend that Executive approves the Submission draft (the Publication Draft) and the accompanying Addendum of Proposed Changes together with representations received thereon for submission for Examination.

6. Urgent Business

Any other business which the Chair considers urgent under the Local Government Act 1972.

Democracy Officer: Bartek Wytrzyaszewski

Contact details:

- Telephone: 01904 551088
- Email: democratic.services@york.gov.uk

For more information about any of the following please contact the Democratic Services Officer responsible for servicing this meeting:

- Registering to speak
- Business of the meeting
- Any special arrangements
- Copies of reports and
- For receiving reports in other formats

Contact details are set out above.

City Of York Council

Committee Minutes

Meeting

Local Plan Working Group

Date

27 June 2017

Present

Councillors Ayre (Chair), Carr (Vice-Chair),
N Barnes, D'Agorne, Derbyshire, Lisle,
Looker, Mercer, Reid, Steward, Williams and
Cullwick

Apologies

Councillor Warters

1. **DECLARATIONS OF INTEREST**

Members were asked to declare any personal interests not included on the Register of Interests, any prejudicial interests or any disclosable pecuniary interests which they might have in respect of business on the agenda.

- Councillor Steward declared a personal interest, that he owns one share in Sirius Minerals.
- Councillor Mercer declared a personal interest as she currently holds shares in Sirius Minerals.
- Councillor D'Agorne declared a personal interest that he holds a North Yorkshire Pension Fund.
- Councillor Cullwick declared a personal interest that he and his wife own shares in a pension fund that holds shares in Sirius Minerals.

2. **MINUTES**

Resolved: That the minutes of the meeting held on 23 January 2017 be approved as a correct record and then signed by the Chair.

3. **PUBLIC PARTICIPATION**

It was reported that there had been three registrations to speak under the Council's Public Participation Scheme.

Edie Jones spoke on item 5, Upper and Nether Poppleton Neighbourhood Plan – Examiners Report.

She confirmed that the information used in the preparation of the Poppleton Neighbourhood Plan had been drawn from many sources and was designed to fulfil the aspirations, desires and recommendations from the village population, local businesses, local landowners, farmers, churches and schools. She confirmed that the Poppleton Neighbourhood Plan had to comply with all the processes and procedures that the Local Plan must fulfil and highlighted the costs this had incurred. She stated the Plan had been developed with guidance and vetting on wording of policies and legal processes by City of York Councils officers and that consultants had also been employed. She concluded by thanking those who had supported the process including, officers, Ward Councillors and their local MP.

Cllr Cuthbertson spoke on the general remit of the Committee. He started by congratulating Upper and Neither Poppleton on their Neighbourhood Plan. He thanked the local volunteers who had put hours of expertise and local knowledge into the Plan and he hoped this was the first of many that would be brought forward. He stated that Neighbourhood Plans required the support of a robust Local Plan and highlighted the Examiners comments on this. He made reference to the emerging Local Plan and felt that the current administration had produced an evidence based Plan that would deliver much needed housing whilst focusing on development on Brownfield land and all practical steps to protect the Green Belt, York's character and heritage. He addressed the delays caused to the production of the Local Plan and stated that it should be agreed as soon as possible to discourage any further postponements.

Chris Wedgewood spoke on the removal of site H56 from the preferred sites selection and the reasons why this site should be designated as Local Green Space. He felt that an error had occurred with site H56 because it did not pass Stage 1 of the 2016 site selection methodology, therefore should be removed from the emerging Local Plan. He went on to explain Stage 1 methodology and agreed that the site had been tested against the site selection methodology but had failed this assessment, so could not legitimately progress past Stage 1. He confirmed that a petition of 1300 signatories had asked for the site to be designated as Local Green Space. He stated that under the new emerging Local Plan site H56 would be excluded from the

Green Belt but as the land continued to fulfil the essential Green Belt purposes, it constituted a 'special additional reason' and should be designated Local Green Space.

4. MINERALS AND WASTE JOINT PLAN - PROPOSED CHANGES

Members considered a report that updated them on the outcomes of the consultation on the publication of the draft Minerals and Waste Joint Plan and asked them to recommend that Executive approve the proposed changes to the Joint Plan for the purposes of public consultation.

Officers gave an update and confirmed that the Minerals and Waste Joint Plan was generated with North Yorkshire County Council and the North York Moors National Park Authority and was subject to consultation during October to December 2016. Within that period a total of 1,470 comments from 200 respondents were received. These comments were reviewed by the three authorities and a schedule of proposed changes was produced to provide greater clarity and precision to the wording.

Members were informed of the timescales that would lead to the adoption of the Joint Plan and noted that officers were working on reducing the publication date from summer 2018.

In response to Members questions officers confirmed:

- they would be notifying around 12,000 individuals of the consultation by letter or email and that all information, on the consultation, would be available in hardcopy or online.
- Public drop in sessions had not been arranged but would be organised in York.
- they would look at how further explanations could be included as part of the consultation material, to assist in the interpretation of the proposed changes.
- they would consider rewriting the sentence located at PC92 (Annex B of the report) to improve the grammar.
- the One Planet Council, Better Decision Making Tool, (Annex D of the report) was being piloted by officers and had generated mixed responses. After the initial first 6 months, guidelines would be tightened and become more prescriptive.

Resolved: That the Local Plan Working Group recommend to Executive:

- i) That the representations received on the publication, Minerals and Waste Joint Plan, for North Yorkshire, York and the North York Moors National Park (Annex A of the report), be noted.

Reason: For information and to provide a context to the proposed changes.

- ii) That the draft Minerals and Waste Joint Plan for York, North Yorkshire and North York Moors National Park Schedule of Proposed Changes (Annex B of the report), for the purposes of consultation, be approved.

Reason: So that an NPPF compliant Joint Waste and Minerals Plan can be progressed.

- iii) That the Director of Economy and Place in consultation with the Executive Member for Transport and Planning be authorised to make non-substantive editorial changes to the Schedule of Proposed Changes (Annex B of the report) and other supporting documents proposed to be published alongside the Plan.

Reason: So that an NPPF compliant Joint Waste and Minerals Plan can be progressed.

5. UPPER AND NETHER POPPLETON NEIGHBOURHOOD PLAN - EXAMINERS REPORT

Members considered a report that asked them to consider the Upper and Nether Poppleton Neighbourhood Plan Examiner's Report and a Decision Statement which included the Council's proposed response to the Examiner's recommended modifications.

The Head of Integrated Strategy gave an update and praised Upper and Nether Poppleton Parish Councils and the Neighbourhood Plan Committee on producing a commendable Neighbourhood Plan. He thanked all involved for the technical work done on this. He confirmed that the Plan had been in progress since 2014 and they had been several stages to work

through. Following the submission consultation, the Plan was put forward for examination. The Examiner's report was received in May 2017 and it concluded that subject to modifications, the Plan should go forward to referendum.

Members noted the timelines to adoption and that the Plan would be voted on by eligible residents of Upper and Nether Poppleton, where a 50% response, from those entitled to vote, must be received.

Members welcomed and supported the Neighbourhood Plan and commended the commitment of all those involved in its development.

Resolved: That the Local Plan Working Group recommend that Executive:

- i) Agree the Examiner's modifications and the further minor modifications set out at Annex B of the report to the Upper and Nether Poppleton Neighbourhood Plan and that subject to those modifications, the Neighbourhood Plan meets the Basic Conditions and other legislative requirements.

Reason: To allow the Neighbourhood Plan to progress in line with neighbourhood planning legislation.

- ii) Agree that the Upper and Nether Poppleton Neighbourhood Plan, as modified by recommendation i) proceeds to a local referendum based on the geographic boundary of the parishes of Upper and Nether Poppleton, as recommend by the Examiner.

Reason: To allow the Neighbourhood Plan to progress in line with neighbourhood planning legislation.

- (iii) Approve the Decision Statement, attached at Annex B of the report, to be published on the City of York Council's website.

Reason: To allow the Neighbourhood Plan to progress in line with neighbourhood planning legislation.

Cllr N Ayre, Chair
[The meeting started at 5.33 pm and finished at 6.15 pm].

Local Plan Working Group

12 October 2017

Report of the Corporate Director of Economy and Place

Upper and Nether Poppleton Neighbourhood Plan**Summary**

1. The purpose of the report is to consider the results of the Upper and Nether Poppleton Neighbourhood Plan referendum. It asks Members to recommend to Executive to formally 'make' the Neighbourhood Plan and bring it into full legal force as part of the Development Plan for York. This will allow the Neighbourhood Plan to progress in line with the relevant Neighbourhood Planning legislation and Regulations. This paper will be considered by Members of Executive on 19 October 2017.

Background

2. The Localism Act 2011 introduced new powers for community groups to prepare neighbourhood plans for their local areas. The Council has a statutory duty to assist communities in the preparation of Neighbourhood Plans and to take plans through a process of Examination and Referendum. The local authority is required to take decisions at key stages in the process within time limits that apply, as set out in the Neighbourhood Planning (General) Regulations 2012 as amended in 2015 and 2016 ("the Regulations").
3. The Upper and Nether Poppleton Neighbourhood Plan has been prepared jointly by both Upper Poppleton Parish Council and Nether Poppleton Parish Council with on-going engagement with the local community and City of York Council. The Plan has been through the following stages of preparation:
 - Designation as a Neighbourhood Area (October 2014)
 - Consultation on a Pre-Submission version (March 2015)
 - Consultation on a 2nd Pre-submission version (May 2016)
 - Submission to City of York Council (November 2016)

- Submission consultation (December 2016)
 - Examination (January-May 2017)
 - Further consultation on the Strategic Environmental Assessment (March 2017)
 - Examiner's Report issued (16 May 2017)
 - Referendum (23 August 2017)
4. The Examiner's Report concluded that subject to modifications, the Upper and Nether Poppleton Neighbourhood Plan met the necessary basic conditions (as set out in Schedule 4b (8) of the Town and Country Planning Act 1990, as amended by the Localism Act 2011) and subject to these modifications being made it should proceed to referendum.
 5. At Local Plan Working Group on 27 June and Executive on 29 June 2017, Members accepted the Examiner's recommendations and agreed that the Upper and Nether Poppleton Neighbourhood Plan should proceed to referendum.
 6. A referendum was held on 23 August 2017.

Referendum

7. A referendum on the Upper and Nether Poppleton Neighbourhood Plan was held on 23 August 2017 and was organised by the City of York Council. As per the Examiner's recommendations, the referendum area was the same as the Neighbourhood Area designated by the Council, which are the parishes of Nether and Upper Poppleton.
8. Polling Stations at All Saints Church (Upper Poppleton) and the Tithe Barn (Nether Poppleton) were open from 7am until 10pm on Wednesday 23 August.
9. The Declaration of Results of Poll contained at Annex A to this report confirms that 1,207 residents voted in the referendum, out of a potential 3345 on the electoral roll (36.08% turnout). The results on whether to accept the Upper and Nether Poppleton Neighbourhood Plan were:-
 - YES = 1,102 (91.3%)
 - NO = 103 (9.7%)

10. The Neighbourhood Planning Regulations (2012 as amended) requires that where over 50% of those voting in the Neighbourhood Plan referendum, vote in favour of the Neighbourhood Plan, then the Council is obliged to 'make' the plan (i.e. bring it into force as part of the Development Plan). The Council is not subject to this requirement if the making of the plan would breach, or would otherwise be incompatible with, any EU obligation or any of the Convention rights (within the meaning of the Human Rights Act 1998) or there are unresolved legal challenges.
11. The Planning and Compulsory Purchase Act 2004 also provides that a Neighbourhood Plan for an area becomes part of the development plan for that area after it is approved by an applicable referendum, prior to the plan being 'made' by the Council. In the very limited circumstances where the local planning authority might decide not to 'make' the neighbourhood plan, it will cease to be part of the development plan for the area. Given that the referendum result was 91.30% in favour of the Neighbourhood Plan; the Upper and Nether Poppleton Neighbourhood Plan and the policies within it are now part of the statutory development plan for City of York.
12. The Neighbourhood Plan must be made by the Council within 8 weeks beginning with the day immediately following that on which the referendum is held (unless the Plan is incompatible with EU/HR legislation or there is an unresolved legal challenge). This date is 18 October 2017.

Options

13. Members are asked to advise Executive to formally 'make' the Upper and Nether Poppleton Neighbourhood Plan and bring it into full legal force as part of the Development Plan for York. There are not considered to be any reasons not to 'make' the Plan.

Analysis

14. This report presents to Members the outcome of the Upper and Nether Poppleton Neighbourhood Plan referendum. At 91.30% in favour of using the neighbourhood plan to help determine planning applications in the defined neighbourhood area, this endorsement is demonstrably higher than the required threshold of more than half of those voting. A positive majority at the referendum means that the Council is now obliged to "make" the plan and bring it into full legal force as part of the

Development Plan for York. The Neighbourhood Plan is considered to meet the basic conditions and all relevant legal and procedural requirements and this is supported in the Examiner's Report. It is advised that the plan be made by the Council given the positive vote in support of the neighbourhood plan and nothing has changed since the earlier consideration of the Examiner's report and modifications which would suggest that the Plan would breach, or be incompatible with any EU obligation or any of the Convention of Rights. Nor is there any unresolved legal challenge in respect of the Plan. There are no reasons why the Council should not proceed to 'make' the Neighbourhood Plan in accordance with the outcome of the referendum.

Next Steps

15. Once the plan is 'made', it will achieve its full legal status. It forms part of the statutory development plan for the area and will sit alongside the Local Plan (once adopted). The Neighbourhood Plan contains a series of policies that will be used when determining planning applications that are located within the defined Neighbourhood Area. Planning law requires that applications for planning permission must be determined in accordance with the development plan unless material considerations indicate otherwise.

Financial Implications

16. The responsibility and therefore the costs of the Examination and Referendum stages of the Neighbourhood Plan production lie with the City of York Council. The table below sets out a breakdown of the non-staffing costs of producing the Upper and Nether Poppleton Neighbourhood Plan to date and also sets out the costs associated with the Examination and Referendum.

Stage	Cost
Designation consultation	£500
Submission consultation	£500
NP grant to Parish Councils	£3,000
Examination	£8,600
SEA Consultation	£500
Referendum	£5,875.00
Total	£18,975.00

17. There is also a significant level of officer costs required throughout the process to provide the required support to each of the Neighbourhood Planning Bodies. A significant level of officer input at an appropriate level is needed throughout the process to ensure legal conformity, appropriate plan content, technical advice, including provision of mapping and assistance with Strategic Environmental Assessment (SEA) and Habitat Regulation Assessment (HRA).

Council Plan

18. Under the 2015-2019 Council Plan objectives the project will assist in the creation of a Prosperous City for All, and be a Council that listens to residents particularly by ensuring that:
- i. Everyone who lives in the city can enjoy its unique heritage and range of activities.
 - ii. Residents can access affordable homes while the greenbelt and unique character of the city is protected.
 - iii. Visitors, businesses and residents are impressed with the quality of our city.
 - iv. Local businesses can thrive.
 - v. Efficient and affordable transport links enable residents and businesses to access key services and opportunities.
 - vi. Environmental Sustainability underpins everything we do.
 - vii. We are entrepreneurial, by making the most of commercial activities.
 - viii. Engage with our communities, listening to their views and taking them into account.

Implications

19. The following implications have been assessed:
- **Financial**– The examination and referendum will be funded by City of York Council. Once a date for the referendum is set the Council can apply for a government grant of £20,000 towards the costs of the Councils involvement in preparing the Plan (including the costs of the Examination and referendum). Any shortfall will need to be accommodated within existing resource.
 - **Human Resources (HR)** – None
 - **Legal** - The Legal implications are set out within the body of this report.
 - **Crime and Disorder**– None

- **Information Technology (IT)** – None
- **Property** – None
- **Other** – None

Risk Management

20. In compliance with the Council's risk management strategy, the main risks associated with the Poppleton Neighbourhood Plan are as follows:
- The decision whether or not to 'make' the Neighbourhood Plan is, like all decisions of a public authority, open to challenge by judicial review. The risk of any such legal challenge being successful has been minimised by the thorough and robust way in which it has been prepared and tested.
 - Risks arising from failure to comply with the laws and regulations relating to Planning and the SA and Strategic Environmental Assessment processes and not exercising local control of developments.

Recommendations

21. Members are asked to:

- i) Consider the results of the referendum and make a recommendation to Executive to formally 'make' the Neighbourhood Plan on 19 October 2017.

Reason: To allow the Neighbourhood Plan to progress in line with the Neighbourhood Planning Regulations.

- ii) Make a recommendation to Executive to approve the Decision Statement attached at Annex B to be published in accordance with Regulation 19 of the Neighbourhood Planning (General) Regulations 2012 (as amended).

Reason: To allow the Neighbourhood Plan to progress in line with neighbourhood planning legislation.

DECLARATION OF RESULT OF POLL

Referendum on the Upper and Nether Poppleton Neighbourhood Plan Area

On Wednesday 23 August 2017

I, Andrew Flecknor, being the Deputy Counting Officer at the above referendum, do hereby give notice of the number of votes recorded for each answer to the question:

Question:		
Do you want City of York Council to use the Neighbourhood Plan for the Upper and Nether Poppleton to help it decide planning applications in the neighbourhood area?		
	Votes Recorded	Percentage
Number cast in favour of a YES	1102	91%
Number cast in favour of a NO	103	9%

The number of ballot papers rejected as follows:	Number of ballot papers
A Want of an Official Mark	
B Voting for more answers than required	
C Writing or mark by which voter could be identified	
D Being unmarked or wholly void for uncertainty	2
TOTAL	2

Electorate: 3345

Ballot Papers Issued: 1207

Turnout : 36.08%

Upper and Nether Poppleton Neighbourhood Plan

Final Decision Statement published pursuant to Section 38A (9) and (10) Planning and Compulsory Purchase Act 2004 (as amended) and Regulations 19 and 20 of the Neighbourhood Planning (General) Regulations 2012 (as amended)

1. Summary

Following a positive referendum result on the 23rd August 2017, City of York Council is publicising its decision made on 19th October 2017 by the Executive to 'make' the Upper and Nether Poppleton Neighbourhood Plan part of the City of York Development Plan in accordance with Regulation 19 of the Neighbourhood Planning (General) Regulations 2012.

2. Background

Upper Poppleton Parish Council and Nether Poppleton Parish Council, as the qualifying body, successfully applied for the parishes of Upper and Nether Poppleton to be jointly designated as the Upper and Nether Poppleton Neighbourhood Area under the Neighbourhood Planning (General) Regulations (2012). Following the submission of the Upper and Nether Poppleton Neighbourhood Plan to the Council, the plan was publicised and comments were invited from the public and stakeholders. The consultation period closed on 23rd January 2017.

3. Decision and Reasoning

City of York Council appointed an independent Examiner; Mr Andrew Ashcroft BA (Hons) MA, DMS, MRTPI, to review whether the plan met the basic conditions required by legislation and whether the plan should proceed to referendum.

The Examiner's Report concluded that the plan meets the Basic Conditions, and that subject to the modifications proposed in the report and which are set out in the Upper and Nether Poppleton

Neighbourhood Plan Decision Statement (dated 30th June 2017), the plan should proceed to a Referendum.

A referendum was held on 23rd August 2017 and 91.3% of those who voted were in favour of the plan. Paragraph 38A (4)(a) of the Planning and Compulsory Purchase Act 2004 as amended requires that the Council must make the Neighbourhood Plan if more than half of those voting have voted in favour of the plan. City of York Council is not subject to this duty if the making of the plan would breach, or would otherwise be incompatible with, any EU obligation or any of the Convention rights (within the meaning of the Human Rights Act 1998).

The referendum held on 23rd August 2017 met the requirements of the Localism Act 2011; it was held in the Upper and Nether Poppleton Neighbourhood Area and posed the question:

Do you want City of York Council to use the Neighbourhood Plan for the Upper and Nether Poppleton to help it decide planning applications in the neighbourhood area?

The count took place on the 23rd August 2017 and greater than 50% of those who voted were in favour of the plan being used to help decide planning applications in the plan area.

The results of the referendum were:

Response	Votes recorded (percentage)
Yes	91.3%
No	8.7%
Turnout	36.08%

The Council considers that the Upper and Nether Poppleton Neighbourhood Plan meets the basic conditions (set out in paragraph 8(2) of Schedule 4B of the Town and Country Planning Act 1990 as amended), its promotion process was compliant with legal and procedural requirements and it does not breach the legislation (set out in Section 38A(6) of the Compulsory Purchase Act 2004).

4. Inspection of Decision Statement and made Neighbourhood Plan

This decision statement can be viewed on the City of York Council website and the Upper and Nether Poppleton Neighbourhood Plan website:

www.york.gov.uk/neighbourhoodplanning

www.plan4poppleton.co.uk

In accordance with Regulation 20 of the Regulations, the Upper and Nether Poppleton Neighbourhood Plan can be viewed on the Council's website and the Upper and Nether Poppleton Neighbourhood Plan website:

www.york.gov.uk/neighbourhoodplanning

www.plan4poppleton.co.uk

A copy of this decision statement is being sent to:-

- The qualifying body, namely Upper and Nether Poppleton Parish Councils; and
- To any person who asked to be notified of the decision.

Paper copies of this statement and the made Neighbourhood Plan can also be viewed at:

- City of York Council, West Offices, Station Rise, York, YO1 6GA (Mon-Fri 8.30am-5.00pm)
- Poppleton Library, The Village, Upper Poppleton, York, YO26 6JT (Mon, Wed, Fri 10-12.30 and 2-5pm, Thur, Sat 10-12.30pm)

For further information please contact the Neighbourhood Planning team on neighbourhoodplanning@york.gov.uk or 01904 552255

Signed

Local Plan Working Group

12 October 2017

Report of the Corporate Director of Economy and Place

Minerals and Waste Joint Plan – Submission**Purpose of the Report**

1. To update Members on the outcomes of the consultation on the Addendum of Proposed Changes to the Minerals and Waste Joint Plan and ask Members to recommend that Executive approves the Submission draft (the Publication Draft) and the accompanying Addendum of Proposed Changes together with representations received thereon for submission for Examination.

Summary

2. Following approval by Executive on 29th June 2017 and equivalent approval by North Yorkshire County Council and the North York Moors National Park Authority, the Minerals and Waste Joint Plan (Joint Plan) Addendum of Proposed Changes document was published for representations on 12th July 2017.
3. An 8 week period for representations was provided, closing at 5pm on 6th September 2017. Within that period a total of 143 specific comments were received from 36 respondents. The majority of responses relate to the proposed changes regarding the policy approach for hydrocarbons (oil and gas) development. A summary of the responses by responder is attached at Annex A and a summary of the responses by issue together with an officer response is attached at Annex B.
4. In accordance with the Regulations, the purpose of publishing the Joint Plan Addendum of Proposed Changes was to provide an opportunity for those interested in the Plan to make representations on matters of soundness (i.e. whether the Proposed Changes to the Joint Plan meets

the tests of soundness for local plans as established in national planning policy) and whether it complies with relevant legislation including the statutory Duty to Cooperate on strategic cross-boundary issues.

5. Representations received on the Publication Joint Plan need to be provided to the Planning Inspectorate alongside the Plan, when it is submitted for independent Examination in Public (EiP). These representations, together with any changes proposed by the Joint Plan authorities (i.e. the Addendum) and any representations thereon, will need to be made available to be considered by the Inspector appointed to conduct the EiP.
6. As stated in the report to Executive on 29th June, following consultation on the Addendum of Proposed Changes, the full Minerals and Waste Joint Plan (MWJP) and representations received will be reported again to Local Plan Working Group (12th October 2017) and Executive (19th October 2017) for information. Subject to the outcome of that consultation, the Executive will be invited to recommend to Full Council on 26th October 2017 (and the equivalents at the joint authorities) that the MWJP be submitted for examination in Public by an independent planning inspector.

Background

7. The City of York Council as a unitary authority is also a waste and minerals planning authority and to satisfy the provisions in the National Planning Policy Framework, it must develop the necessary policies for minerals and waste. This statutory responsibility effectively involves identifying all waste arising in the area from all sources, such as, household, commercial, hazardous and agricultural, and demonstrating how this is dealt with spatially. With regard to minerals it is necessary to identify the requirement for minerals including aggregates and how these will be sourced. Both these tasks have to be addressed for the lifetime of any development plan.
8. City of York is currently preparing a Local Plan with strategic policies on minerals and waste and a separate joint minerals and waste development plan document with North Yorkshire County Council and the North York Moors National Park Authority. This is known as the Minerals and Waste Joint Plan.

9. The Joint Plan addresses a range of issues relating to the future supply of minerals and needs for waste infrastructure over the period to 31 December 2030. Key issues include:
- Planning for the future supply of aggregates minerals such as sand and gravel and crushed rock, as well as other minerals currently worked in the area;
 - Developing policy to respond to newer forms of development such as shale gas;
 - Identifying requirements for additional waste management capacity needed to fill any capacity 'gaps' in the existing network of facilities;
 - Addressing requirements for safeguarding minerals resources and important infrastructure;
 - Developing a range of new development management policies to help determine planning applications for minerals and waste development;
 - Identifying a range of site allocations for minerals and waste development where development would be regarded as acceptable in principle (see Appendix 1 to the Publication draft consultation document).
10. The Minerals and Waste Joint Plan has involved a number of key public consultation stages to ensure there is every opportunity for community involvement. The key stages include:
- First Consultation (completed May/June 2013)
 - Issues and Options Consultation (Completed March/April 2014)
 - Additional or Revised Sites Consultation (Completed January/February 2015)
 - Preferred Options Consultation (Completed November 2015 - January 2016)
 - Publication stage (Completed November - December 2016)
 - Post-Publication Proposed Changes Consultation (July-September 2017)
 - **Submission stage (Anticipated November 2017)**
 - Examination in Public (Anticipated early 2018)
 - Adoption (Anticipated Spring 2018)
11. The dates above show some departure from the City of York Council's Local Development Scheme (LDS) published in July 2016. The LDS currently states submission in April 2017, Examination in June/July 2017, Adoption in October/November 2017. The slippage reflects the

additional stage of consultation on the Proposed Changes ahead of Submission as proposed in this report. A revised York LDS will be submitted alongside the Minerals and Waste Plan.

Legislation and Guidance

Procedure Legislation and Guidance

12. In considering the proposed approach to submission of the Joint Plan, it is important to have regard to the following legislation and guidance. Section 20 of the Planning and Compulsory Purchase Act 2004 as amended requires that the plan must not be submitted unless relevant regulations have been complied with and the authority considers that the document is ready for examination.
13. National Planning Practice Guidance indicates that the authority should submit a plan with 'any proposed changes it considers appropriate', the documents made available at publication stage, details of who was consulted and how the main issues are addressed, details of representations following publication and a summary of the main issues raised.
14. Procedural Practice in the Examination of Local Plans, published by the Planning Inspectorate in 2016, emphasises that the publication plan should be the plan it intends to submit for examination. It indicates that if the authority wishes to make changes to the publication plan those changes should be prepared as an addendum to the plan and should be subject to further consultation/sustainability appraisal before submission. It highlights that changes post submission are to cater for the unexpected – it is not to allow the authority to complete or finalise preparation of the plan. Main modifications will only be considered necessary to make the plan sound or compliant with the Regulations.
15. This guidance also states that where an addendum of focussed changes is submitted with the plan the Inspector will need to assess it – whether there is a change to strategy and whether there has been consultation. If satisfied on these points the addendum can be considered as part of the submitted plan. If this is not the case the Inspector may treat these as other main modifications at post submission/pre hearing stage. Authorities can make minor modifications to a plan on adoption and will be accountable for the scope of these.

Oil and Gas Legislation and Guidance

16. National planning policy states that both conventional and unconventional hydrocarbons (oil and gas) are minerals of national and local importance and that minerals plans should include policies for their extraction. Development plans which do not deal with fracking or simply seek to restrain it will, at best, be accorded little weight by the Secretary of State on appeal leaving applications to be judged purely against the general policies of the NPPF.
17. There are different regulatory regimes that are responsible for the different stages of oil and gas development. Mineral Planning Authorities (the Council) only have control over the planning application stage. The Oil and Gas Authority are responsible for issuing PEDL licences. The Environment Agency and Health and Safety Executive also assess and regulate the environment, water and seismic risks before permits for operation are issued.

Options

18. Officers request that Members consider the following options:
 - i) That the Executive recommend that Full Council approve the Submission version of the Minerals and Waste Joint Plan for Submission for Examination;
 - ii) That the Executive recommend that Full Council approve the Submission version of the Minerals and Waste Joint Plan for Submission for Examination subject to modifications agreed at this meeting;
 - iii) That the Executive recommend that Full Council reject the Submission version of the Minerals and Waste Joint Plan and request that further work is undertaken or an alternative approach is taken ahead of it being submitted for Examination.

Analysis

19. It is considered that having taken into consideration the representations made, including those in respect of the Addendum, the appropriate option is to approve the Submission version of the Minerals and Waste Joint Plan (comprising the Publication Draft (2016) and Addendum of Proposed Changes (2017)) and allow it to be submitted for Examination as per Option 1.

20. The table contained at Annex B provides a summary of the representations by issue together with an officer response. In summary, the majority of representations relate to the oil and gas policies M16, M17, M18 and supporting text. Several comments relate directly to sites and site boundary changes, and in general, widespread support was received for proposed changes in relation to waste, infrastructure, safeguarding and development management policies.

Representations submitted to the Proposed Changes to the Oil and Gas Section

21. These representations (77 individual comments from 18 organisations/ industry and 7 members of the public) are a combination of supports, objections and comments.
22. Generally, support from activist/environmental groups was received for proposed changes where it is perceived that the change goes further to recognise the implications of shale gas extraction and places greater restrictions on the industry.
23. Objections were received from industry in relation to the same changes, as it is considered that the changes do not fully reflect regulatory roles, contradict policies within adopted Minerals and Waste Plans elsewhere in the UK, and do not add any further value to the Plan. These comments could be interpreted as objections to the level of perceived additional restrictions placed on the industry.
24. A number of representations were received which suggested that the Joint Plan policies should go further in terms of restricting oil and gas development in order to fully protect the communities, environment and economy of the Plan area. Officers consider that as the Plan stands it (Publication draft and Addendum of Proposed Changes) goes as far as it possibly can in terms of offering protective policies and restricting oil and gas development in certain areas. It is considered that as it stands, the Plan is 'sound' and sits within the national policy framework in relation to this types of development. An attempt to go beyond the restrictions imposed by national policy, could result in the Plan being found 'unsound' in relation to it not being 'Consistent with national policy' (NPPF paragraph 182)
25. Some objections received state that the proposed change will have a negative effect on the policy/supporting text and that the Submission draft of the Joint Plan should revert back to the Publication draft of the

Plan (2016). Where this type of objection is raised, the table at Annex B provides a detailed officer response. However, in summary, it is considered that the Proposed Changes made reflect the best position in terms of being in line with national planning policy and guidance which requires a positive approach to planning for development whilst providing robust protection for the communities, environment and economy of the Plan area. For these reasons, the Officers' recommendation is to submit for examination the Publication draft Plan (2016) as the Submission Draft accompanied by the Addendum of Proposed Changes (2017) for an Inspector to consider.

Next Steps

26. Approval of the Plan for Submission and for Examination in Public is a function of Full Council and such approval will also be required from North Yorkshire County Council and North York Moors National Park Authority. Should all three authorities approve this Plan for Submission, it is anticipated that all the relevant documents will be ready to be submitted in mid-November 2017.
27. The Submission documents will include those that were made available at the Publication stage, including details of who was consulted when preparing the Joint Plan (at Regulation 18 stage) and how the main issues raised have been addressed. Details of the representations made following publication of the Joint Plan and a summary of the main issues raised will also be included. A copy of the Addendum of Proposed Changes and any representation received will also be included. A Statement of Representations Procedure will be published alongside the submission version of the Joint Plan.
28. A pre-examination meeting, Examination in Public and Inspector's report will follow in early 2018, with an anticipated adoption of the Joint Plan in spring 2018.

Council Plan

29. Under the 2015-2019 Council Plan objectives the project will assist in the creation of a Prosperous City for All, and be a Council that listens to residents particularly by ensuring that:
 - i. Everyone who lives in the city can enjoy its unique heritage and range of activities.

- ii. Residents can access affordable homes while the greenbelt and unique character of the city is protected.
- iii. Visitors, businesses and residents are impressed with the quality of our city.
- iv. Local businesses can thrive.
- v. Efficient and affordable transport links enable residents and businesses to access key services and opportunities.
- vi. Environmental Sustainability underpins everything we do.
- vii. We are entrepreneurial, by making the most of commercial activities.
- viii. Engage with our communities, listening to their views and taking them into account.

Implications

30. The following implications have been assessed.
 - Financial – The estimated cost of £20,500 was reported to LPWG and Executive earlier in the year and will be funded through existing budgets. This will be monitored and refined as the process towards examination continues.
 - Human Resources (HR) – The production of a Minerals and Waste Joint Plan and associated evidence base requires the continued implementation of a comprehensive work programme that will predominantly, although not exclusively, need to be resourced within EAP.
 - Better Decision Making Tool – A better decision making tool will be attached at Annex C for the Executive report.
 - Legal – The statutory process must be followed in preparing and consulting upon the joint plan and decisions must be taken by each of the separate Authorities involved in their own constitutional decision making processes. The statutory duty to co-operate applies (S33A Planning & Compulsory Purchase Act 2004 inserted by S110 Localism Act 2011). If the Minerals and Waste Joint Plan is adopted by all three Councils, it will eventually become part of the statutory development plan for York along with the emerging York Local Plan. The Plans should therefore be in conformity particularly in relation to any site allocations and safeguarded areas proposed within the York area in the Joint Minerals and Waste Plan.
 - Information Technology (IT) - There are no IT implications

- Crime and Disorder – None.
- Information Technology (IT) – None
- Property – The Plan includes land within Council ownership.
- Other – None

Risk Management

31. In compliance with the Council's risk management strategy, the main risks in producing a Minerals and Waste Plan are as follows:

- The need to steer, promote or restrict minerals and waste development across its administrative area:
- The potential damage to the Council's image and reputation if a development plan is not adopted in an appropriate timeframe; and
- Risks arising from failure to comply with the laws and regulations relating to Planning and the SA and Strategic Environmental Assessment processes and not exercising local control of developments.

32. Measured in terms of impact and likelihood, the risks associated with this report have been assessed as requiring frequent monitoring.

Recommendations

33. Members are asked to recommend to the Executive to:

- i) Consider the representations received on the Addendum of Proposed Changes Minerals and Waste Joint Plan for North Yorkshire, York and the North York Moors National Park;

Reason:- to consider whether to recommend to full council whether to move forward to Submission.

- ii) Recommend to Full Council that the Submission draft of the Minerals and Waste Joint Plan for York, North Yorkshire and North York Moors National Park (comprising the Publication draft Plan (2016) accompanied by the Addendum of Proposed Changes (2017) be approved for submission for examination

Reason:- So that an NPPF compliant Joint Waste and Minerals Plan can be progressed

- iii) Recommend to Full Council that the Director of Economy and Place in consultation with the Executive Member for Transport and Planning be authorised to make non-substantive editorial changes to the Submission Draft and other supporting documents proposed to be submitted alongside the Plan;

Reason:- So that an NPPF compliant Joint Waste and Minerals Plan can be progressed

Minerals and Waste Joint Plan

Minerals and Waste Joint Plan

Addendum of Proposed Changes Responses

September 2017

Minerals and Waste Joint Plan Addendum Proposed Changes July 2017 – September 2017

Addendum Proposed Changes - Summary of responses

This stage was undertaken to provide an opportunity for representations to be made regarding the legal compliance and the 'soundness' of the Addendum of Proposed Changes on the Minerals and Waste Joint Plan before it is submitted for Examination in Public by an independent Planning Inspector.

Consultation

The Addendum of Proposed Changes of the Minerals and Waste Joint Plan was available for comment between the 12th July 2017 and 6th September 2017.

A wide range of consultees and stakeholders were contacted either by email or letter. All consultees were sent details of the consultation along with a statement of representations procedure, response form and guidance notes.

The request for comments on the Addendum of Proposed Changes document was publicised through a range of means consisting of:

- press release issued jointly by the three authorities;
- public notice in papers which provide geographical coverage over the plan area (York Press, Northern Echo, Yorkshire post);
- articles in the Authorities electronic newsletter 'NY NOW' and the Moors Messenger;
- posters displayed in libraries notice boards;
- Information on the North York Moors and City of York website;
- Twitter announcement by the three authorities;

Responses to consultation

A total of 143 comments were received from 36 respondents.

The duly made responses received are summarised in the attached report. Each response has a number allocated to it such as 1234/5678. The first number i.e. 1234 is the respondents unique reference number which was supplied in the acknowledgement email or letter, the second number is the unique reference for that particular comment.

005: Minerals

009: Crushed Rock

Minerals Products Association

0115/0085/PC050/U

Paragraph 5.031p
 Proposed Change PC050
 Policy Number M06
 Site Reference

Comment

Policy M06 is not consistent with national policy and so considered unsound.

The policy is not consistent with the wording in the NPPF Paragraph 145 with regards to the provision of landbanks for crushed rock. The NPPF requires 'the maintenance of at least 10 years' and does not refer to a 'minimum 10 year landbank' as set out in Policy M06.

The policy's requirement to source new reserves from outside the National Park and AONBs is also not consistent with National Policy. NPPF Paragraph 144 states:

'...as far as practical, provide for the maintenance of landbanks of non-energy minerals from outside National Parks, the Boards, Areas of Outstanding Natural Beauty, World Heritage Sites, Scheduled Monuments and Conservation Areas.'

As currently drafted the policy seems to imply no future development in the National Park regardless of the circumstances.

Suggested Modification

Reword the Policy to make it consistent with the NPPF

A [minimum overall] landbank of AT LEAST 10 years will be maintained for crushed rock throughout the Plan period. A separate [minimum 10 year] landbank OF AT LEAST 10 YEARS will be identified and maintained for Magnesian Limestone crushed rock throughout the Plan period.

Where new reserves of crushed rock are required in order to maintain [the overall] A landbank [above the 10 year minimum] OF AT LEAST 10 YEARS these will be sourced from outside the National Park and Areas of Outstanding Natural Beauty AS FAR AS PRACTICAL.

0317/0017/PC050/LC.U

Tarmac

Paragraph 5.031p
 Proposed Change PC050
 Policy Number M06
 Site Reference

Comment

Although the wording of the proposed change is supported, Tarmac’s initial representations regarding Policy M06 remain. Policy M06 is not consistent with NPPF on two counts and is therefore considered unsound. The wording of Policy M06 is not consistent with the wording of NPPF para 145 with regards to the provision of landbanks for crushed rock. The NPPF requires “the maintenance of at least 10 years” and does not refer to a “minimum 10 year landbank” as set out in Policy M06. The policy’s requirement to source new reserves from outside the National Park and AONBs is not consistent with NPPF para 144, which states: “... AS FAR AS IS PRACTICABLE [emphasis added], provide for the maintenance of landbanks of non-energy minerals from outside National Parks, the Broads, Areas of Outstanding Natural Beauty, World Heritage Sites, Scheduled Monuments and Conservations Areas”. Policy M06 seems to imply no future development in the National Park regardless of circumstances.

Suggested Modification

Policy M06 should be reworded as suggested below to make it consistent with the NPPF:

“A landbank of AT LEAST 10 years will be maintained for crushed rock throughout the Plan period. A separate landbank OF AT LEAST 10 YEARS will be identified and maintained for Magnesian Limestone crushed rock throughout the Plan period.

Where new reserves of crushed rock are required in order to maintain overall A landbank OF AT LEAST 10 YEARS these will be sourced from outside the National Park and Areas of Outstanding Natural Beauty AS FAR AS IS PRACTICABLE.”

Historic England

0120/0006/PC098//S

Paragraph 5.035s
 Proposed Change PC098
 Policy Number M07
 Site Reference MJP06

Comment

This Proposed Change is sound.

The application site lies within the Swale/Ure river catchments. This larger area contains the most significant concentration of Neolithic and Bronze Age monuments and related archaeological deposits in the north of England. Within this area are seven henges, two cursus monuments, several barrows, enclosures, pit alignments and the Devil's Arrows standing stones. Many of the features within this landscape are scheduled as nationally important. The three henges on Thornborough Moor are unparalleled in their size, alignment and form, and the degree of preservation. The northern henge, currently under woodland, is probably the best preserved such monument in the country; only the great bank and ditch at Avebury exceeds it in scale.

Historic England was involved in discussions regarding the application for mineral extraction from this site (Langwith House Farm) which is currently awaiting determination. In our response, we commented that we considered that the supporting information had demonstrated that there will not be a direct physical impact on known archaeological deposits associated with the Thornborough Henges or their key visual relationships.

However, we did consider that further mineral extraction in this area would have a harmful cumulative impact on the setting of the heritage assets (designated and undesignated) associated with the Thornborough Henges, the promontory of Thornborough Moor on which they sit and, specifically, the ability to appreciate and experience them in their landscape. However, we considered that the mitigation measures proposed as part of that application offered a clear opportunity to reverse some of the harmful impacts of past quarrying in the landscape and to reconnect the henges with their landscape setting.

Given the potential for nationally-important archaeological remains on at least part of this site, it is essential that any application is informed by a comprehensive archaeological assessment (including an evaluation against the framework set out in Managing Landscape Change project). This Proposed Change reflects the recommendation of the Sustainability Appraisal Heritage Impact Assessment.

Comment

Support the addition of the proposed change under the development requirements criteria for the site allocation MJP06 at Langwith Hall Farm to include a requirement for any application to be supported by an archaeological assessment.

Historic England

0120/0007/PC099/S

Paragraph 5.035s
 Proposed Change PC099
 Policy Number M07
 Site Reference MJP07

Comment

This Proposed Change is sound.

The application site lies within the Swale/Ure river catchments. This larger area contains the most significant concentration of Neolithic and Bronze Age monuments and related archaeological deposits in the north of England. Within this area are seven henges, two cursus monuments, several barrows, enclosures, pit alignments and the Devil's Arrows standing stones. Many of the features within this landscape are scheduled as nationally important. The three henges on Thornborough Moor are unparalleled in their size, alignment and form, and the degree of preservation. The northern henge, currently under woodland, is probably the best preserved such monument in the country; only the great bank and ditch at Avebury exceeds it in scale.

Archaeological evaluations within the site area have demonstrated the presence of archaeological features in the southern half of this site (identified in the Environmental Statement which accompanied Application No NY/2011/0242/ENV as Area D). These should be considered as having high archaeological value and are part of, and contribute to, our understanding of the significance of the Thornborough landscape.

Given the potential for nationally-important archaeological remains on at least part of this site, it is essential that any application is informed by a comprehensive archaeological assessment (including an evaluation against the framework set out in Managing Landscape Change project). This Proposed Change reflects the recommendation of the Sustainability Appraisal Heritage Impact Assessment.

The Development Requirements for the site East of Well includes one relating to the restoration scheme using opportunities to reconnect the Henges to their landscape setting. In view of the proximity of these two sites, it is wholly appropriate that a similar requirement should be included within its Development Requirements.

Paragraph 5.035s
 Proposed Change PC102
 Policy Number M07
 Site Reference MJP21

Comment

Do not support the proposed revision to the site boundary of the Killerby site allocation MJP21 to exclude land nearest to the Killerby Hall Stable Block listed building. This has been made in response to the representations submitted by Historic England (Ref. 0120/0044/M07/U). This revision is not justified.

Tarmac has previously submitted representations on this subject (Dec 2016 and Jan 2017) and it is considered that these are still valid and should be taken into account. See attached copy of the supporting archaeological assessment submitted on behalf of Tarmac by Wardell Armstrong (Dec 2016).

Disagree that the setting of the listed stable block beside Killerby Hall includes the wider agricultural landscape and consider its setting to be the non registered park and garden. There has been change to the immediate surroundings of the stable block over time, not least a new large building (18x24m and 8.8m tall, granted under PD rights in 2014) and constructed approximately 50m away from it to the north, for the storage of biomass. The area which is to be removed from the allocations under PC102 broadly covers Phases 1A and 2A of the proposed extraction area (see attached figure). Once sand and gravel is extracted, this area would be used as silt lagoons progressively infilled and then restored back to agriculture; thus any change to the character of the land south east and beyond the currently non registered park and garden, from which the stable block could be appreciated, would be temporary and generally reversible.

The revised site boundary for the allocation MJP21 will reduce the reserve by approximately 750,000 tonnes (6.8% of the deposit) and the duration of operations by 2 years. These reserves would thus be sterilised unnecessarily. The land in question is to be used following extraction of sand for silt disposal in formed lagoons. The position of these lagoons for sustainable operations, including water management reasons, needs to be in close proximity to the processing plant. The position of the processing plant has been sited in the most appropriate location following environmental and operational assessment; thus the location of the lagoons and the plant site are interdependent and the proposed site boundary revision to remove the area should not be considered only in terms of an arithmetical reduction of tonnage as referred to above.

MJP21 is currently subject of a planning application with accompanying EIA (App Ref. NY/2010/0356/ENV) which NYCC have resolved to approve. Both NYCC and Historic England (HE) have been carefully consulted as part of the planning application process. A working scheme of investigation (WSI) has been implemented at Killerby and HE has declined the opportunity to make further comment when re-consulted. The application has clearly demonstrated that there would be no significant adverse effect upon the setting of the Killerby Hall Stable Block.

In conclusion, Tarmac strongly believes there is insufficient justification for the proposed site boundary revision to site allocation MJP21 at Killerby.

Suggested Modification

The original site boundary for the MJP21 Killerby site allocation should be reinstated.

Minerals Products Association**0115/0087/PC102/U**

Paragraph 5.035s
 Proposed Change PC102
 Policy Number M07

Comment

Have no comments on the specific merits or otherwise of this site allocation but concerned that the site boundaries have been changed at this late stage in the Plan process as a matter of principle.
 A detailed sustainability appraisal has been undertaken by the mineral planning authority to inform the plan making process and it wrong as a matter of principle to reduce the site extent following the observations from Heritage England without detailed evidence.
 The issues of setting, if relevant, would be a matter to be properly tested at the planning application stage. It is not sustainable to sterilise mineral at this stage of the mineral plan process.

Suggested Modification

The original site boundary for the site allocation should be reinstated.

Comment

This Proposed Change is sound.

Following the last Consultation, we visited this site with the local planning authority and the Consultants acting for the applicants. This visit confirmed our concerns about the impact which mineral development in this location might have upon the Grade II Listed stable block to Killerby Hall. As a result we maintain our view that the Heritage Impact Assessment (HIA) has under-scored the degree of harm that the development of this area would be likely to cause to this designated heritage asset. Having said that, however, we now are in a position to confirm that, in our opinion, extraction from this area is unlikely to harm the setting of the other designated heritage assets in the vicinity of this site.

In terms of the Stable Block to Killerby Hall, the HIA which accompanied the Sustainability Appraisal considered that this site “forms an important part of the agricultural landscape context of the overall farm/hall complex, which is the primary setting of the building”. Although this could not be said to be true of the whole of this extensive Allocation, certainly this is the case for the field which lies to the south-east of this Listed Building. From the public footpath which runs along the northern boundary of this field the buildings at Killerby Hall and, especially, the stable block are extremely prominent. As such the view from this part of the site enables the Listed stable block to be appreciated in the context of the other historic buildings at Killerby Hall, the parkland surrounding these buildings, and within its wider rural setting. In the words of the NPPF and its definition of setting, we consider these views make a positive contribution to the significance of the stable block.

That being the case, then the loss of this particular field and mineral extraction from it would, according to the scoring system used in the HIA, be likely to have a “Moderate Negative Effect” upon the stable block. Moreover, it does not appear from the Appraisal that this harm is capable of mitigation in a manner which, itself, would not harm the significance of this Listed Building. For example, screening would itself involve the introduction of a feature which is not typical of this particular landscape character and therefore cause harm to the setting of the Listed Building.

When considering the impact of proposals upon the significance of a designated heritage asset, Para. 132 of the NPPF makes it clear that “great weight” should be given to the conservation of those assets. In addition, there is a requirement under S66 of the Planning (Listed Buildings and Conservation Areas) Act that “special regard” should be had to the desirability of preserving Listed Buildings or their setting or any features of special architectural or historic interest which they possess.

Therefore, an allocation which would be likely to result in harm to elements which contribute to the significance of a Listed Building would be contrary to both the provisions of the NPPF and to the statutory requirements set out in the 1990 Act unless there were clear public benefits which outweighed that harm.

The proposed amendment to the site’s boundary will reduce the harm to the setting of this building.

The Proposed Change is considered Legally Compliant and Sound.

Historic England	
Paragraph	5.035s
Proposed Change	PC104
Policy Number	M07
Site Reference	MJP17

Comment

This Proposed Change is sound.

Following the last Consultation, we visited this site with the local planning authority and the Consultants acting for the applicants. The site visit confirmed our view that mineral development of this site is likely to harm the setting of both the Grade II Listed Rudd Hall and its neighbour the Grade II Listed Gyll Hall.

Rudd Hall occupies a prominent hill-top site and has clearly been designed to command views across the surrounding landscape. The Heritage Impact Assessment (HIA), which accompanied the Sustainability Appraisal, considered that this site “forms an important part of the agricultural landscape context” of this building. We would concur with this evaluation.

In a similar manner the principal elevation of Gyll Hall commands views in a southerly direction across the land which falls away from the house towards Lords Lane. Once again, the Assessment considered that this area formed part of “the wider agricultural landscape” which is “important to the significance” of Gyll Hall. Again, we would agree with this evaluation.

As a result, the HIA considered that the loss of this site and its subsequent development for minerals extraction would be likely to have a “moderately negative effect” on the significance of the both these Listed Buildings (i.e. the second-highest magnitude of harm). We would endorse this conclusion. Moreover, it does not appear from the Appraisal that this harm is capable of mitigation in a manner which, itself, would not harm the significance of these designated heritage assets.

When considering the impact of proposals upon the significance of a designated heritage asset, Para. 132 of the NPPF makes it clear that “great weight” should be given to the conservation of those assets. In addition, there is a requirement under S66 of the Planning (Listed Buildings and Conservation Areas) Act that “special regard” should be had to the desirability of preserving Listed Buildings or their setting or any features of special architectural or historic interest which they possess.

Therefore, an allocation which would be likely to result in harm to elements which contribute to the significance of two Listed Buildings in its vicinity would be contrary to both the provisions of the NPPF and to the statutory requirements set out in the 1990 Act unless there were clear public benefits which outweighed that harm.

The proposed amendment to the extent of Site MJP17 will help to reduce the harm to the setting of these Listed Buildings.

Minerals Products Association**0115/0088/PC104/U**

Paragraph 5.035s
 Proposed Change PC104
 Policy Number M07
 Site Reference MJP17

Comment

Have no comments on the specific merits or otherwise of this site allocation but concerned that the site boundaries have been changed at this late stage in the Plan process as a matter of principle.
 A detailed sustainability appraisal has been undertaken by the mineral planning authority to inform the plan making process and it wrong as a matter of principle to reduce the site extent following the observations from Heritage England without detailed evidence.
 The issues of setting, if relevant, would be a matter to be properly tested at the planning application stage. It is not sustainable to sterilise mineral at this stage of the mineral plan process.

Suggested Modification

The original site boundary for the site allocation should be reinstated.

0317/0025/PC104/U

Tarmac

Paragraph 5.035s
Proposed Change PC104
Policy Number M07
Site Reference MJP17

Comment

Do not support the proposed revision to the site boundary of the Catterick site allocation MJP17 to exclude land nearest to the Rudd Hall and Ghyll Hall listed buildings. This has been made in response to the representations submitted by Historic England (Ref. 0120/0044/M07/U). This revision is not justified.

Tarmac have previously submitted representations on this subject (Dec 2016 and Jan 2017) and it is considered that these are still valid and should be taken into account. A summary of these representations is set out below.

Given the orientation of the Rudd Hall front façade westwards towards the road that approaches it, and the fact that Rudd Hall farm is immediately east of the Hall at least partially blocking views eastwards, it is considered not proven that development of the allocation would cause the level of harm anticipated by Historic England (HE). Even if the extent of any potential extraction area were to be curtailed, the extent that this should be extended as proposed under PC104 is questionable.

Ghyll Hall clearly faces south and there are a multitude of farm buildings to the east of it. There may be some justification to partially reduce the westward extent of an extraction area south of this Hall, and any boundary redrawn at this stage would require a more detailed assessment.

The removal of the proposed fields from the allocation will reduce the reserve by approximately 1,030,500 tonnes and the duration of operations by just over 2 years assuming 500,000 tonnes per annum production. As a result of the revised site boundary, the area of reserves proposed to be removed from the allocation are substantial, leaving only approximately 1.1m tonnes in a narrow north west corridor, a tonnage that would not be economically viable for a greenfield site.

It has been proposed that, in general terms, landscape planting and temporary screening bunding would be put in place between the site and the listed buildings. Tarmac does not feel that the potential benefits of these measures to mitigate visual effects has been given due consideration and thus the reserves at the site could potentially be sterilised unnecessarily.

The allocation of a site area does not necessarily mean that the whole of the land within the allocation could, would or should be extracted. Extraction boundaries would have to be justified in EIA studies supporting any planning application.

Tarmac strongly believes there is insufficient justification or particular necessity for the proposed site boundary revision to site allocation MJP17 at Catterick at this stage. Instead the text attached to the allocations should require that visibility to and from the setting of listed buildings should be thoroughly investigated, once potential site design has been development, so as not to cause substantial harm to the setting of the listed buildings.

Suggested Modification

The original site boundary for the MJP17 Catterick site allocation should be reinstated.

Hanson UK

1102/0036/PC053/U

Paragraph 5.072
 Proposed Change PC053
 Policy Number M12
 Site Reference

Comment

A planning application for Blubberhouses Quarry was submitted in December 2011. In July 2016 the application considered that all outstanding matters had been addressed and the application was in a position to be determined, to date it remains undetermined.

The delay appears to be the potential re-alignment of the A59 which may impact the Blubberhouses site, since no proposals have as yet come forward it is not possible for the applicant to undertake an assessment of the design or cumulative impact of the potential re- alignment as part of the existing application. The applicant considers that the Council should determine the existing planning application, and that it should be for any road re-alignment planning application to consider and justify the design and cumulative impacts taking into consideration Blubberhouses Quarry. In light of this the revised wording of paragraph 5.72 is not considered to be justified, positively prepared or effective and suggest amending the text.

Suggested Modification

A further relevant consideration in respect of Blubberhouses Quarry is that the County Council (within its Local Transport Plan 4: strategy and strategic transport prospectus) and the York and North Yorkshire & East Riding Local Enterprise Partnerships (within its strategic economic plan) have identified the need to realign the A59 road at Kex Gill, near Blubberhouses quarry, as a key strategic priority. The existing alignment of the A59 in the Kex Gill area is subject to poor land stability issues, resulting in several road closures taking place on this regionally important strategic trans Pennine route over the past 15 years.

A definitive proposed realignment is not yet available and there is no safeguarded route. ONCE A DEFINITIVE ROUTE HAS BEEN SAFEGUARDED, THE DESIGN OF THE A59 MAY NEED TO TAKE INTO ACCOUNT BLUBBERHOUSES QUARRY AND THE POTENTIAL FOR CUMULATIVE IMPACTS. [Work is currently on going identifying options, however there is potential for this project to overlap with the Blubberhouses quarry site. In this scenario there would be a need to ensure that the potential for conflict between road realignment and the quarry is reflected in design of both schemes and the potential for any cumulative impact taken into account where necessary.]

Comment

Supportive of the recognition that exploratory activity is intensive and for unconventional hydrocarbons the activity may take considerably longer than conventional sites. A time period of 12 to 25 weeks is given for conventional hydrocarbons but no estimate is given for unconventional hydrocarbons. This suggests that activity will last for a much longer period and any such period may be acceptable.

Much of the Plan area is rural with low levels of background noise. Prolonged activity in the exploration stage will in many cases be unacceptable to local communities.

Supportive of the proposed amendment to state that the production stage may include refracturing of existing wells.

Suggested Modification

Exploratory work should be limited to a defined period otherwise there will be excessive (and open ended) nuisance caused to the local community.

Zetland Group**2145/0012/PC056/U**

Paragraph 5.107
 Proposed Change PC056
 Policy Number
 Site Reference

Comment

The Proposed Change to para 5.107 is not effective. Additional text suggested to para 5.107 first bullet point, to clarify that activity will be subsequent to drilling. Our comment at Publication stage on this paragraph still stands.

Suggested Modification:

For unconventional hydrocarbons, exploratory activity, SUBSEQUENT TO DRILLING, may take considerably longer, especially if hydraulic fracturing...

Comment

This proposed change is supported and should be included in the final Plan.

Frack Free Ryedale

3684/0061/PC058/LC.U.DTC

Paragraph 5.111
 Proposed Change PC058
 Policy Number
 Site Reference

Comment

The proposed change of words is contradictory when compared to the description of the exploration stage (i.e. early stage of development) given in the summary in para. 5.107 first bullet point. Here the plan text talks about 'temporary and intermittent activity'. The words in 5.107 talk of 'intense activity' and goes on to say that this will be (in case of unconventional hydrocarbons) for a considerably longer period.

Suggested Modification

There cannot be two different descriptions.

The Plan here must state the same as 5.107 that 'there will be intense activity in the early stages of development of a well site, which could extend for 12-25 years for conventional hydrocarbons and potentially considerably longer for unconventional hydrocarbons'

Comment

Paragraph 5.119(g) should be removed. The nature of activities required to extract conventional or unconventional hydrocarbons will vary on a site by site basis. UKOOG see no justification for this paragraph, which is therefore considered to be unsound.

Egdon Resources (UK) Limited**0150/0090/PC062/LC.U.DTC**

Paragraph 5.119
 Proposed Change PC062
 Policy Number
 Site Reference

Comment

Disagrees as the text still contradicts Policy M9 of the adopted Lincolnshire M&WLP (2016) that makes clear that there is no difference in planning terms between conventional and unconventional hydrocarbons. Moreover, neither NPPF or Minerals PPG makes any distinction between conventional and unconventional hydrocarbons. The focus should be on exploration, appraisal and production stages. It should be amended to more accurately reflect the great importance the Government attaches to hydrocarbon extraction in national policy and guidance and to enable the delivery of sustainable development. Suggested text change is: IT IS CONSIDERED THAT THERE IS NO JUSTIFIABLE REASON IN PLANNING POLICY TERMS TO SEPARATE SHALE GAS FROM OTHER HYDROCARBON DEVELOPMENT. ALL HYDROCARBON DEVELOPMENT HAS THE POTENTIAL TO DELIVER NATIONAL ENERGY REQUIREMENTS, BUT SHOULD BE SUBJECT TO ENVIRONMENTAL SAFEGUARDS.

Cuadrilla Resources Ltd**3704/0112/PC062/LC.U.DTC**

Paragraph 5.119
 Proposed Change PC062
 Policy Number
 Site Reference

Comment

Para 5.119 g) to be removed as it doesn't add any further value. The nature of activities required to extract conventional or unconventional hydrocarbons would vary on a site by site basis. Such activities would not necessarily be consistent between different sites where conventional (or unconventional) geology was present at both sites.

Proposed Modification

Delete Para 5.119 g)

4194/0129/PC062/U

Paragraph 5.119
 Proposed Change PC062
 Policy Number
 Site Reference

Comment

PC62 makes the distinction between conventional and unconventional hydrocarbons based on the porosity or permeability of the rocks they are produced from, without giving a precise definition of what conventional and unconventional mean. While shale gas and coal bed methane are well known as unconventional hydrocarbons, tight gas can also be regarded as unconventional as it requires fracturing.

The proposed change is not justified as when a planning application is submitted there may be a dispute about whether certain hydrocarbons are conventional or unconventional. The definition of unconventional hydrocarbons before the proposed change is more appropriate. The definition made it clear that that shale gas and coal bed methane are always regarded as unconventional hydrocarbons while other hydrocarbons are also regarded as unconventional if hydraulic fracturing is used.

The proposed change is not in compliance with national policy as the effect would be to remove restrictions on unconventional hydrocarbon development from some development which includes hydraulic fracturing. The restrictions which will be removed would include spatial restrictions in part e) of Policy M16, which apply to sites being re-purposed from conventional to unconventional hydrocarbon development.

Suggested Modification

This change should not be included in the Plan and the definition of conventional and unconventional hydrocarbons should remain as in the Publication document. This will make the plan better justified as it will make the distinction between conventional and unconventional hydrocarbons clearer and the way the policies will be applied will also be clearer.

The removal of the proposed change will also make the plan more consistent with paragraphs 110 and 123 of the NPPF as it will limit the spread of the unconventional gas industry.

CPRE (North Yorkshire Region)

2173/0053/PC062

Paragraph 5.119
 Proposed Change PC062
 Policy Number
 Site Reference

Comment

It would be helpful to provide more definitions within this paragraph to explain what is meant by 'short-term' and 'long-term' activities in relation to that set out in the Minerals PPG for greater clarity.

It would also be useful to use the Minerals PPG definition of conventional hydrocarbons setting out that 'higher geology' reservoirs often mean sandstone and limestone.

Fully support the revision to point g) of this paragraph in relation to the fact it is possible to draw distinctions between conventional and unconventional hydrocarbon activity by the details of the proposals.

Frack Free Ryedale**3684/0064/PC062/LC.U.DTC**

Paragraph 5.119
 Proposed Change PC062
 Policy Number
 Site Reference

Comment

Suggest an amendment to 5.119 bullet d as below
 Support 5.119 bullet f - i.e. fracking is fracking. The definition is outwith the Infrastructure Act 2015 definitions, which although is a statutory document is not a planning document therefore the Joint Plan Team are entitled to apply there own definition for the purposes of the Plan with a suitably justified reason.
 Support the proposed amendments to 5.119 bullet g. Associated hydraulic fracturing is defined in section 50 of the Infrastructure Act 2015. Fracking is fracking and therefore whether the volume of any fracturing operation is over or just under the 'defined amount' it should be treated the same for planning purposes. Otherwise there will be applications for hydraulic fracturing which will have the same level of Environmental Impact but be technically under the threshold, as defined in the Infrastructure Act, and so will not gain the same level of scrutiny by the MPA.
 5.119 deals with definitions and it would be helpful to define short-term and long-term using the Minerals PPG as a reference. Significant harm would be another term which would benefit from a definition.

Suggested Modification

In relation to 5.119 bullet d suggest this is amended to state 'FOR EXAMPLE WHERE THE RESERVOIR IS SANDSTONE OR LIMESTONE' in line with national policy.

Third Energy Limited**2762/0102/PC062/U**

Paragraph 5.119
 Proposed Change PC062
 Policy Number
 Site Reference

Comment

Considers the proposed change is not effective as the section is entitled 'Definitions' but the amended text for g) is not a definition but a conjecture about possible future scenarios. Considers the proposed change is not legally compliant as there is not evidence that the conjecture has been validated through co-operation with Oil & Gas Authority (who approve field development plans) nor with representatives of the industry.

INEOS Upstream Ltd**3703/0137/PC062/LC.U.DTC**

Paragraph 5.119
 Proposed Change PC062
 Policy Number
 Site Reference

Comment

The change implies greater complexity and impact from unconventional gas and the requirement for a greater number of well pads and individual wells. The issue is not the number but the scale and impact. Unconventional gas sites are smaller and may have less impact. Given the principle that all planning decisions are made on their merits on the basis of what the decision maker finds proposed for a site and how to mitigation is proposed to be addressed this is placing a question in the decision maker's mind rather than allowing for objective assessment. Paragraph 5.119 provides definitions of hydrocarbon development for use when implementing the plan. INEOS objects to the definition contained in 5.119 f) as it is contrary to Section 50 of the Infrastructure Act 2015. It states hydraulic fracturing includes the fracturing of rock under pressure regardless of the volume of fracture fluid used. This definition is incorrect and contrary to current legislation. Other concerns with para 5.119 are the use of incorrect or irrelevant terminology in the definitions e.g. conventional drilling, unconventional techniques, more conventional less complex drilling. These technical and non-technical definitions need to be corrected to avoid misinterpretation and misleading the public on what is hydrocarbon development.

The views of UKOOG on this matter are also supported.

Suggested Modification

Amend the text to address the criticisms above.

Comment

The Proposed Change to para 5.122 is not effective. Section 4B(1) of the Petroleum Act 1998 does not contain the definition of associated hydraulic fracturing, as is stated.

4196/0097/PC063/U

Paragraph 5.122
 Proposed Change PC063
 Policy Number M16
 Site Reference

Comment

Does not consider it could be effective as many of the fracked wells in the USA would not be counted as fracking under the definition of using 1,000 cubic litres or more of fluid. Queries what is to stop companies saying they are using a few litres less and thus avoiding regulation. Considers the plan should apply to all hydraulic fracturing as it would be virtually impossible to monitor and regulate the quantity of fluid used.

4194/0130/PC063/U

Paragraph 5.122
 Proposed Change PC063
 Policy Number M16
 Site Reference

Comment

This change refers to section 4B1 of the Petroleum Act 1998. This amendment brought in with the Infrastructure Act 2015 defines hydraulic fracturing as using more than 1,000 cubic metres of fluid in one stage or more 10,000 cubic metres overall. This is a misleading definition. While the change does not adopt this definition for the Plan the point needs to be clarified as PC62 and PC66 open the door to such a definition.

The definition of hydraulic fracturing is an important issue. Government introduced measures to protect National Parks from surface development including hydraulic fracturing, but the protection was undermined by the Infrastructure Act and its definition of hydraulic fracturing. The effect of the Infrastructure Act is to allow hydraulic fracturing with less than 10,000 cubic metres of fluid per well to be used within National Parks and AONBs. If the same definition is used in the Minerals and Waste Joint Plan the protections included in the plan will also be undermined. The proposed change is not justified as it would threaten all of the important protections against the harm that would be caused by hydraulic fracturing.

The proposed change loosens controls on hydraulic fracturing and is not compatible with paragraphs 110, 123 or 115 of the NPPF.

Suggested Modification

The proposed change should make clear that the definition of hydraulic fracturing, included in paragraph 5.119 of the Plan will be used and the definition included in the Infrastructure Act will not be used. This will make the Plan sound and better justified and consistent with National Policy as would protect the region from environmental harm and noise hydraulic fracturing will cause.

Comment

Addendum does not provide clarity and does not address the fundamental problem with Policy M16 which seeks to apply restrictions to hydraulic fracturing for conventional gas resources. It is not for the Plan to change the definition of hydraulic fracturing which has been defined in the Infrastructure Act 2015. It should be amended to more accurately reflect the great importance the Government attaches to hydrocarbon extraction in national policy and guidance and to enable the delivery of sustainable development.

INEOS Upstream Ltd**3703/0138/PC066/LC.U.DTC**

Paragraph 5.124
 Proposed Change PC066
 Policy Number M16
 Site Reference

Comment

The revised text states that " However, it is not the intention of the Minerals Planning Authority to unreasonably restrict activity typically associated with production of conventional resources." two issues arise from this. Firstly there is an implication that there will be a restriction on unconventional fracturing operations over and above the Infrastructure Act. Secondly, there is a question about how "unreasonably" is defined. Significant restrictions could be placed on activity before it reaches the point where it is judged unreasonable. This provides the decision maker with the scope to bring into their decision making their own prejudices, real or unintended, and to bow to outside pressure. This would not be objective decision making; it would be outside the scope of what is normally considered 'sound' in plan making; and for these reasons the word unreasonable is not considered acceptable in development plan policy because it replaces objectivity with subjectivity in decision making.

Para 5.124 states that the new regulations and proposed surface protections would only apply to high volume fracturing. However the publication draft states that it is not considered appropriate to distinguish between this and lower levels of activity. This is introducing a control that does not exist in national regulations and guidance. This is contrary to Section 50 of the 2015 Infrastructure Act.

Suggested Modification

Amend the text to address all the criticisms above.

Comment

Support the addition at the end of paragraph 5.124 and recognise that sites will need to be treated on a site by site basis.

4194/0131/PC066/U

Paragraph 5.124
 Proposed Change PC066
 Policy Number M16
 Site Reference

Comment

PC66 retreats from the previous version of the Plan, which in paragraph 5.119 says hydraulic fracturing 'includes fracturing of rock under hydraulic pressure regardless of the volume of fluid used.' While PC66 does not delete the existing definition, it does add a caveat which says 'it is not the intention of the Mineral Planning Authorities to unreasonably restrict activity typically associated with conventional resources.' It is not clear what 'typical' means and due to change PC62 it is not clear the term 'conventional resources' means either.

The change is not justified as when a planning application is submitted it will cause confusion as to what constitutes hydraulic fracturing and what constitutes 'activity typically associated with convention resources.' The proposed change is a backwards step when compared with the existing definition in the Publication.

Suggested Modifications

The proposed change should not be included in the Plan and the existing definition of hydraulic fracturing in paragraph 5.119 should be used instead, this would be justified as it would make the plan clearer than it would be with the proposed change and would avoid misinterpretation at planning application stage. The removal of the change would make the Plan more compliant with National Policy as it would offer protection against environmental harm.

Cuadrilla Resources Ltd**3704/0111/PC066/LC.U**

Paragraph 5.124
 Proposed Change PC066
 Policy Number M16
 Site Reference

Comment

Clarification has been provided (PC63) regarding the thresholds of 1,000 cubic metres of fluid defined as 'associated hydraulic fracturing' for a single stage by The Infrastructure Act 2015; this unnecessarily leads into discussions (PC66) in Para 5.124 on lower volume well treatments of conventional wells resulting in 'similar issues' and those under The Infrastructure Act 2015 definitions. There is no justification as to why the same planning restrictions established under the Infrastructure Act 2015 for the specific purpose of controlling development of 'associated hydraulic fracturing' apply to all other oil and gas activity; therefore our assertion is that this position is unsound and unnecessarily restrictive.

Suggested Modification

Para 5.124 should be amended to ensure consistency with Section 50 of the Infrastructure Act 2015.

Comment

Support the additional sentence in Para 5.127 as recognise that equipment will be on site for the long term which is understood to be the reality.

INEOS Upstream Ltd

3703/0139/PC067/LC.U.DTC

Paragraph 5.127
 Proposed Change PC067
 Policy Number M16
 Site Reference

Comment

This addition is not relevant. If a planning application is made it follows that there will need to be equipment and activity on site for the length of the development. The relevant question is the impact of a proposal. Once that is deemed acceptable it follows that all activity and equipment are acceptable in that location under the description of the development that has been approved. Again, the proposed wording is creating uncertainty for the decision maker rather than allowing for objective assessment.

Suggested Modification

Amend the text to address the criticisms above.

Malton Town Council**0758/0059/PC068/LC.U**

Paragraph 5.130
 Proposed Change PC068
 Policy Number M16

Comment

Support the proposed change as the Yorkshire Wolds and the Vale of Pickering have both been identified in the Ryedale Plan under Policy SP13 as areas of locally important landscapes.

The change has been included in the explanatory text but not in Policy M16 itself, and it is not clear what the term 'regard will be had' means.

Concerned that in the future large scale fracking applications will be determined by a National Infrastructure Planning body in London who have no local accountability. It is therefore important that firm and robust guidance should be provided by the MWJP and the proposed change should be given proper consideration.

In any other planning context surface development for fracking would be classed as employment or economic development. Therefore to make the proposed change robust applications for surface development for fracking in areas of locally important landscapes identified in District or Borough local plans should be determined in accordance with policies in the local plan which apply to employment or economic development.

Suggested modification

- a) The proposed change in PC68 should be repeated in the main policy text of either M16 or M17
- b) and reworded 'In some parts of the affected by PEDLs, areas of locally important landscapes have been identified in District and Borough Local Plans. Where these continue to form part of the statutory development plan, and are relevant to the proposal which falls to be determined by THE APPROPRIATE BODY RESPONSIBLE FOR DETERMINING THE APPLICATION, THE PROPOSAL SHALL BE DETERMINED IN ACCORDANCE WITH THE POLICIES OF THE LOCAL PLAN WHICH RELATE TO EMPLOYMENT, ECONOMIC OR EQUIVALENT DEVELOPMENT, AND SUCH OTHER LOCAL PLAN POLICIES AS MAY BE APPLICABLE [North Yorkshire County Council as Minerals and Waste Planning Authority, regard will be had to the requirements of any associated local plan policy] '

Comment

The proposed amendment is welcomed as the Yorkshire Wolds and the Vale of Pickering have both been identified in the Ryedale Plan under SP13 as areas of locally important landscapes. However, there is concern that the amendment has been included in the explanatory text and not in Policy 16 itself. It is considered that it is not clear what 'regard will be had' means. There are concerns that, following on from the 2017 General Elections, 'large scale planning applications' for fracking will be referred for determination by a National Infrastructure Planning body in London and there would be no local accountability and so it is important that robust guidance should be provided in the MWJP. Fracking comes with the construction of complex surface structures, including plant and machinery such as compressors, drilling rigs, offices, etc. that would, in any other planning context, be classed as employment or economic development. Therefore, in order to make the amendment robust when fracking applications are situated in areas of locally important landscapes identified in a District or Borough Plan, they should be determined in accordance with the policies in that plan applying to employment or economic development.

Suggested Modification

It is considered that the amendment should be repeated the main policy text of either Policy M16 or M17 and reworded as following:

"In some parts of the Plan area affected by PEDLs, areas of locally important landscapes have been identified in District and Borough Local Plans. Where these continue to form part of the statutory development plan, and are relevant to a proposal which falls to be determined by [North Yorkshire County Council as Mineral and Waste Planning Authority regard will be had to the requirements of any associated local plan policy] THE APPROPRIATE BODY RESPONSIBLE FOR DETERMINING THE APPLICATION, THE PROPOSAL WILL BE DETERMINED IN ACCORDANCE WITH THE POLICIES OF THE LOCAL PLAN WHICH RELATE TO EMPLOYMENT, ECONOMIC OR EQUIVALENT DEVELOPMENT AND SUCH OTHER LOCAL PLAN POLICIES AS MAY BE APPLICABLE".

Comment

It is considered that the Plan would be unsound in not taking full account of Policy SP13 of the Ryedale Plan. The proposed amendment gives some recognition to local plans but lacks strength by only appearing in the explanatory text and not actually forming part of Policy M16. The phrase 'regard will be had' lacks clarity. A National Infrastructure Planning body in London may be determining "large scale planning applications" for fracking in the future so it is of the utmost importance that the MWJP consists of firm guidance. In order to make the amendment robust when fracking applications situated in areas of locally important landscapes identified in a District Plan area made, they should be determined in accordance with the policies in that plan applying to employment or economic development. This is because the expansive concrete fracking pads, workshops, offices, pipes, storage facilities, etc. would, in any other planning context, be classed as employment or economic development.

Suggested Modification

It is considered that the amendment should be repeated the main policy text of either Policy M16 or M17 and reworded as following:

In some parts of the Plan area affected by PEDLs, areas of locally important landscapes have been identified in District and Borough Local Plans. Where these continue to form part of the statutory development plan, and are relevant to a proposal which falls to be determined by [North Yorkshire County Council as Mineral and Waste Planning Authority regard will be had to the requirements of any associated local plan policy] THE APPROPRIATE BODY RESPONSIBLE FOR DETERMINING THE APPLICATION, THE PROPOSAL WILL BE DETERMINED IN ACCORDANCE WITH THE POLICIES OF THE LOCAL PLAN WHICH REALTE TO EMPLOYMENT, ECONOMIC OR EQUIVALENT DEVELOPMENT AND SUCH OTHER LOCAL PLAN POLICIES AS MAY BE APPLICABLE.

Frack Free Ryedale

3684/0069/PC068/LC.S.DTC

Paragraph 5.130
 Proposed Change PC068
 Policy Number M16
 Site Reference

Comment

Support the proposed amendments. However there is a judgement to be made on a case by case basis relating to the 'regard will be had' in respect of the policies and strategies in place within adopted local plans. Minerals can only be worked where they are found and are a finite resource the 'need' for the mineral should not necessarily outweigh any detrimental impacts when locating a well pad in such an area. The NPPF, whilst stating that a great weight should be attributed to the benefits of mineral extraction, does not suggest anywhere in the document, that this should therefore be given primacy over any other consideration when determining planning applications.

The Yorkshire Wolds and Vale of Pickering have both been identified in the Ryedale Plan under Policy SP13 as areas of locally important landscapes. However, this amendment has been included in the explanatory text and not in Policy M16 itself, and it is not clear what 'regard will be had' means. It is likely this situation will occur in other districts within the plan area.

It is noted that the conservative manifesto published for the 2017 General Election states that 'large scale planning applications' for fracking will be referred for determination by a National Infrastructure Planning body in London which has no local accountability. It is critical that robust guidance should be provided in the MWJP to ensure that, in order to make the Plan effective, the purpose of the above amendment is given full and proper consideration should this happen.

Suggested Modification

Consider that more clarity should be contained in Policy M16 itself to reflect the commentary of this paragraph. It is noted that no amendment is proposed to Policy M16 however if this is to be a robust policy this should be contained within the policy wording itself.

PC68 should be reworded and added into the main text of Policy M16

'In some parts of the plan area affected by PEDLs, areas of locally important landscapes have been identified in District and Borough Local Plans. Where these form part of the statutory development plan, and are relevant to the proposal to be determined THE APPROPRIATE BODY RESPONSIBLE FOR DETERMINING THE APPLICATION, THE PROPOSAL SHALL BE DETERMINED IN ACCORDANCE WITH THE POLICIES OF THE LOCAL PLAN WHICH RELATE TO EMPLOYMENT, ECONOMIC OR EQUIVALENT DEVELOPMENT, AND SUCH OTHER LOCAL PLAN POLICIES AS MAY BE ACCEPTABLE.'

[North Yorkshire County Council as Minerals and Waste Planning Authority, regard will be had to the requirements of any associated local plan policy]

It could be incorporated into Policy M17 as an alternative

4194/0132/PC070/U

Paragraph 5.130p
 Proposed Change PC070
 Policy Number M17
 Site Reference

Comment

This change removes from Policy M17 the need to consider the proximity of other planned well pads and replaces it with a need to consider only permitted well pads. This undermines the policy's requirement for information on how proposals for unconventional hydrocarbons fit within the overall plan for the area. Information about operators intended sites in the future should be considered and used to determine the whether the cumulative effect of all planned developments in the area, not just the ones already permitted, would result in unacceptable impacts. The change is not compliant with national policy as it would make planning consent for unconventional hydrocarbon development easier to win without taking into account the cumulative effect of such development. Widespread an intensive unconventional hydrocarbon development can result in environmental harm and so is not compatible with paragraph 110 and 123 of the NPPF.

Suggested Modification

This change should not be accepted and the previous wording, which includes consideration of planned well pads should be included in the Plan, this will make the plan more justified as will allow for the full consideration of the cumulative impact of unconventional hydrocarbon development during planning decisions. It will also make the plan more compliant with national policy as it will tend to limit the environmental harm caused by unconventional hydrocarbon development.

Comment

Considers the proposed change is not effective as regardless of the size of the licence area, this is an arbitrary limit of 10 well pads per 100km² that is unnecessarily restrictive and without justification. Future well sites may vary both in their size and number of wells hosted on site so this arbitrary limit could potentially be either too low or too high. The existing controls in the planning regime cover the development of hydrocarbon sites effectively without such limits.

INEOS Upstream Ltd**3703/0140/PC072/LC.U.DTC**

Paragraph 5.137
 Proposed Change PC072
 Policy Number M17
 Site Reference

Comment

Para 5.137 deals with a proposed well pad development density. The geographical spacing, scale, and type of development in addition to the topographical and surface characteristics of an area should be considered in the assessment of a proposal and the density of development in a particular area. It should not be based on a PEDL boundary or arbitrary figure for well density that does not reflect the nature of an applicant's proposals or their ability of the environment to accommodate it appropriately.

Suggested Modification

Amend the text to address the comments above.

Comment

Applying arbitrary thresholds on pad density is unnecessarily restrictive. The key consideration is to ensure that effects of hydrocarbon development can either be removed or appropriately managed through the variety of existing institutional arrangements already in place through the Environment Agency, Natural England, Health and Safety Executive, Oil and Gas Authority, BEIS, DCLG and other bodies plus the proper implementation of the processes such as EIA and ERA. The process by which the pad density had been calculated is unknown and appears to result in arbitrary thresholds. Limits should not be considered until relevant applications are submitted, assessed and concluded in a transparent manner.

Suggested Modification

reference to the application of 10 well pads per 100km² PEDL area (and its pro-rata application being applied where the area is less or more than 100km) to be removed from Para 5.137.

United Kingdom Onshore Oil and Gas (UKOOG)**3997/0108/PC072/U**

Paragraph 5.137

Comment

Does not consider it is justified to apply arbitrary thresholds on the density placement of well sites as this is unnecessary restrictive and unsound.

Zetland Group**2145/0015/PC072/U**

Paragraph 5.137
 Proposed Change PC072
 Policy Number M17
 Site Reference

Comment

The Proposed Change to para 5.137 is not effective.
 It is not appropriate to set pad density limits. The para is over complicated and unnecessary – hydrocarbon developments are often temporary, low impact developments – some areas may well have capacity to accommodate numerically more than others. In the context of unconventional oil and gas, where the geology is not targeting specific geological structures such as structural or stratigraphic traps, consideration may well be given to pad density, however in order to consider pad density, a further understanding of the unconventional resource must be obtained through initial exploratory works. The ‘Plan’ can be revised once the potential resource is better understood.

 Site Reference

Comment

This paragraph is not in conformity with the guidance as set out in the NPPF and PPG Minerals therefore cannot be considered sound at present. This needs to be reworded to reflect the fact that developers should aim to reduce noise levels at a site to a minimum level, below the absolute thresholds set out in the Minerals PPG, not meet them as set out in the text. The emphasis is on the developer proving to the MPA that the noise produced as a result of development cannot be reduced any further without causing onerous burden. Any planning condition should then reflect the minimum level - not automatically be set at the threshold which is the incorrect interpretation of policy and in rural parts of North Yorkshire that threshold is well above the normal baseline conditions.

This approach was discussed in great detail between the Appellant (Cuadrilla) and Lancashire County Council at the recent enquiries for the fracking appeals in Lancashire, and were agreed with by the Inspector in her report.

Frack Free Ryedale

3684/0075/PC075/LC.U.DTC

Paragraph 5.147
 Proposed Change PC075
 Policy Number M17
 Site Reference

Comment

Consider that the paragraph requires rewording.
 Site lighting is mentioned however flaring is generally treated as outside the jurisdiction of planning in most general terms. Consider that once multiple well sites start to appear (particularly during the exploration and appraisal stages) there would be potential for multiple flares at the same well site and/or different well sites undergoing exploration and appraisal at the same time. This has potential to cause negative visual impact across the area particularly when it is dark. There will also be associated air quality impacts from the emissions and noise from the flaring, these are not covered in the proposed plan. Much of the Plan area is sparsely populated and subject to extremely low levels of background noise, the matter could be dealt with by the requirement that all well completions are green completions. There should be a text amendment to paragraph 5.147 to reflect the requirements of national policy which seek to ensure that local amenity is protected by reducing noise levels to a minimum, below the absolute threshold set out in the PPG, at night. The onus is on the developer to prove they cannot reduce the levels below a certain level without onerous burden, which also needs to be proved to the MPA. The MPA should set any noise condition at that minimum level.

Suggested Modification

New wording should be added to the paragraph to set out

'In considering appropriate noise limits at sensitive receptors, operators WILL BE EXPECTED TO REDUCE TO MINIMUM, ACTIVITIES WHICH GENERATE NOISE, BELOW ABSOLUTE THRESHOLDS AS SET OUT IN THE MINERALS PPG AND NPPF. WHEN THE APPLICANT CAN NOT REDUCE NOISE LEVELS ANY FURTHER WITHOUT ONEROUS BURDEN, THE APPLICANT WILL BE EXPECTED TO PROVIDE EVIDENCE OF THIS BURDEN, IN LINE WITH GUIDANCE IN THE MINERALS PPG AT PARAGRAPH 21, WITH THE OBJECTIVE OF ENSURING A HIGH STANDARD OF PROTECTION FOR LOCAL AMENITY. IN ORDER TO ACHIEVE THIS, THE APPLICANT WILL BE EXPECTED TO UNDERTAKE A SERIES OF ACCURATE NOISE LEVEL MONITORING TO CAPTURE BASE LINE CONDITIONS IN THE VICINITY OF THE SITE LOCATION.'

'ALL WELL COMPLETIONS WILL BE GREEN COMPLETIONS WHICH MEANS NO FLARING WILL BE ALLOWED'

The final sentence could alternatively be incorporated into Policy M18 1)i).

Paragraph 5.152p
 Proposed Change PC079
 Policy Number M18
 Site Reference

Comment

Flaring is used to burn waste gas that cannot be pipelined/stored for commercial use and so must be considered waste and dealt with under part 1)i) of this policy. This is a waste stream which has not been taken into account in the Plan, it could be dealt with by not allowing flaring and having a requirement for 'green completions'.

The plan amendments do not fully deal with the potential issues relating to reinjection. The plan talks of a high standard of protection but does not mention the requirement relating to reinjection having to be currently proven to be BAT. The high standard approach seems at odds with the statement relating to induced seismicity which can be 'mitigated to an acceptable level.' There is no recognition in the supporting text of the chain of responsibility should issues arise using such techniques.

Concerned that the amendment to para 2)i) may lead to a situation that many wells may remain suspended in the hope of becoming commercially viable. This may be used as a reason to extend the term of an existing permission in a speculative way. Suspending wells should not become the norm and the MPA should assess each application on its own merits prior to agreeing to this at the site restoration and aftercare stage only if sufficient evidence is provided to justify any such suspension. This could lead to a large number of suspended wells.

Suggested Modification

Flaring must be considered an onsite waste operation and should be dealt with under this policy by not allowing flaring and requiring only 'green completions'

Support the original version of section 2)i) of policy M18 without the amendment.

4194/0133/PC0795/U

Paragraph 5.152p
 Proposed Change PC079
 Policy Number M18
 Site Reference

Comment

This change removes the need to decommission wells that have reached the end of their operational phase and allows wells to be suspended pending further hydrocarbon development. This allows operators to suspend wells for long periods without permanent decommissioning. This leads to uncertainty amongst the public and lengthens the time during which groundwater is put at risk by the possibility of well casing failure. The wording in the Plan is not clear so a change to the wording is necessary. However the proposed change is not clear enough that lengthy periods of suspension will not be permitted. The change is not compliant with paragraph 143 of the NPPF.

Ground water is at risk of contamination from non decommissioned wells so the proposed change should be altered to make clear that hydrocarbon wells that have completed their initial operational phase should be decommissioned promptly with suspension during periods when the operator considers their options are not being permitted.

Suggested Modification

The proposed change should have the following text added to the relevant part of Policy M18

FOLLOWING THE COMPLETION OF OPERATIONS INCLUDED IN ANY EXISTING PLANNING CONSENT HYDROCARBON WELLS MUST NOT BE SUSPENDED PENDING FURTHER PLANNING APPLICATIONS. HYDROCARBON WELLS MUST ALSO NOT BE LEFT SUSPENDED FOR UNNECESSARILY LONG PERIODS BETWEEN OPERATIONS INCLUDED IN THE PLANNING CONSENT. HYDROCARBON WELLS MUST BE DECOMMISSIONED PROMPTLY FOLLOWING THE COMPLETION OF THEIR OPERATIONAL PHASE.'

The addition of the text would make the plan better justified as it would avoid the current situation where hydrocarbon wells are left suspended for lengthy periods of time. It would also make it more compliant with national policy as it would reduce the risk of contamination from well casing failures.

Third Energy Limited

2762/0105/PC079/U

Paragraph 5.152p
 Proposed Change PC079
 Policy Number M18
 Site Reference

Comment

Considers the proposed change is not effective as the decommissioning of a well is common oil field operational practice and must be undertaken in line with regulatory requirements from the Health and Safety Executive, Environment Agency and Oil & Gas Authority and this is how the risk of any contamination is managed. The remit of the Mineral Planning Authority is the management of surface effects, i.e. site restoration in line with the planning consent.

4194/0134/PC080/S

Paragraph 5.153
Proposed Change PC080
Policy Number M18
Site Reference

Comment

This change deletes the word waste from the paragraph regarding water returned to the surface from the borehole at hydrocarbon wells. This water is typically contaminated with high levels of salt, hydrocarbons, heavy metals and naturally occurring radioactive materials. Because of this contamination the water must be handled and disposed of responsibly. The deletion of the word waste implies that the water returned via the borehole will not always be regarded as waste and therefore might be reused instead of disposed of. This change is not justified as it is important to be clear that contaminated water from the hydrocarbon industry will be disposed of in the appropriate manner. The change is also not consistent with paragraphs 110 and 143 of the NPPF, as the reuse of contaminated water from hydrocarbon wells presents a danger to the environment.

Suggested Modification

The change should not be accepted in the Plan and the reference to waste water should remain in the Plan. This will make the plan better justified as it will prevent contaminated water from hydrocarbon wells being reused in a irresponsible manner. It will also make the plan more consistent with national policy as it will protect the environment from harm.

Frack Free Ryedale

3684/0076/PC080/LC.S.DTC

Paragraph 5.153
 Proposed Change PC080
 Policy Number M18
 Site Reference

Comment

This propose change has not dealt with the suggestion that all waste water from site operations can be treated. This is not the case as the treatment process for the water containing NORM is essentially dilution, and must be taken to a large treatment works able to carry out the process before releasing it into the river system. The paragraph describes the water as being disposed of, it is actually removed from site for further processing. There are no suitable treatment sites within the plan area.

This paragraph is misleading as far as reinjection of waste water into substrata. It is unlikely waste water will be disposed of by reinjection as it will not meet the requirements of assessment of the best available technique (BAT). There is evidence from other parts of the world that links reinjection with increased seismicity in excess of the trigger point in the 'traffic light' warning system used in respect of actually carrying out the fracturing itself. This potential is recognised by the amendment.

Concerned the Plan does not recognise the additional impacts related to noise which can occur should reinjection of water into wells be permitted, this should be taken account of in the plan.

Suggested Modification

Where the word 'waste' is deleted it should say after water 'REQUIRING TREATMENT OR PROCESSING.'

An additional sentence should also be added at the end of this paragraph relating to the potential increase in noise should this practice be permitted on sites.

Some clear definitions around the various water descriptors would assist.

Frack Free Ryedale

3684/0077/PC081/LC.S.DTC

Paragraph 5.156
 Proposed Change PC081
 Policy Number M18
 Site Reference

Comment

Concerned that the amendment to paragraph 5.156 or 5.153 does not reference in anyway the additional impacts to noise levels which can occur as a result of site operations relating specifically to pumping water (waste water), let alone pressurising it should reinjection be allowed on site.

Harworth Estates (UK Coal Operations Ltd)**0127/0032/PC084/LC.DTC.U**

Paragraph 8.027p
 Proposed Change PC084
 Policy Number S03
 Site Reference

Comment

Policy S03 and its supporting text is too restrictive and does not take adequate account of the fact that waste uses may prove unviable. Likewise, a waste proposal use may not fully reflect the aspirations for other uses at a local level where there is a two-tier authority, such as Selby District Council. It is considered that Policy S03, and its supporting text, remains to be fully justified and is not flexible enough to deal with rapidly changing circumstances i.e. changes in the waste market which could affect viability. Policy S03 is therefore unsound. Our Client therefore objects to the current wording contained within the Pre-submission Draft.

Suggested Modification

To address these concerns and provide greater clarity, it is suggested that the supporting text at paragraph 8.29 is to be amended to include the following text before the final sentence:

'WHERE A SITE IS NOT IN USE, VIABILITY ISSUES WILL BE RELEVANT TO CONSIDERING WHETHER THERE IS A REASONABLE PROSPECT OF THE SITE STILL BEING USED FOR WASTE MANAGEMENT IN THE FORSEEABLE FUTURE.'

This will be particularly important in the two-tier parts of the Plan area, where many development decisions are not taken by the waste planning authority. This will ensure that there is an element of flexibility in the event sites safeguarded under Policy S03 can be brought forward for alternative uses in the event that a waste use would be unviable.

Highways England**0112/0026/PC113/S**

Paragraph 8.027s
 Proposed Change PC113
 Policy Number S03
 Site Reference

[Comment](#)

Highways England have considered this additional safeguarded waste site and have no concerns at this time as the proposed change only safeguards the existing site and will not generate additional traffic.

We do not feel that the proposed changes materially alter the overall policy approach of the plan and we therefore remain generally supportive of the policies set out. Highways England considers that the Joint Plan is sound when considered against the tests of being positively prepared, justified, effective, and consistent with national policy.

Harworth Estates (UK Coal Operations Ltd)

0127/0033PC085/LC.DTC,U

Paragraph 8.030
 Proposed Change PC085
 Policy Number S03
 Site Reference

Comment

Policy S03: Waste Management Facility Safeguarding proposes to impose a 250m buffer around all allocated waste management facilities to protect and prevent any conflicting uses. However, Policy S03 and its supporting text do not fully acknowledge that such facilities are often sited on sites where other uses are existing or proposed which would require them to sit within close proximity to each other. In particular, we have previously highlighted the example of the proposals for the employment park at the former Kellingley Colliery Site. As such, our Client welcomes the addition of the suggested additional paragraph proposed via amendment PC85.

We would however highlight that Amendment PC85 will only address situations where proposals for a site are already subject to a planning consent. This still does not adequately address situations where new proposals are either proposed via a planning application, or within an emerging development plan. This proposed amendment fails to be effective and our Client therefore continues to object.

Suggested Modification

To ensure policy PC85 and its supporting text is “sound”, the word 'extant' should be deleted from the first sentence, resulting in the following:

“It is acknowledged that in some cases, including at the former mine sites in the Plan area, there are other proposals for redevelopment which are matters for determination by the relevant local planning authority and that such proposals could overlap with land proposed for safeguarding in the Joint Plan...”

Selby District Council

Comment

Our Client has also previously raised concerns that the Joint Plan fails to fully acknowledge the aspirations, both short and longer term, of district authorities, in particular Selby District Council, which is currently progressing its emerging Local Plan, including site allocations. This omission means that policy S04, is not effective and is therefore in direct conflict with the clear tests outlined in national policy. Our Client therefore continues to object. It was therefore agreed to add the following amendment to the exemption criteria listed at paragraph 8.47 (bullet point 12):

Suggested Modification

"Applications for development on land which is already allocated in an adopted local plan where the plan took account of minerals, and waste AND MINERALS AND WASTE TRANSPORT INFRASTRUCTURE safeguarding requirements, OR, IN THE CASE OF AN EMERGING LOCAL PLAN ALLOCATION, WHERE THE MINERALS AND WASTE PLANNING AUTHORITY HAS RAISED NO SAFEGUARDING CONCERNS DURING CONSULTATION ON THE EMERGING PLAN ALLOCATION".

Paragraph 9.042
 Proposed Change PC091
 Policy Number D06
 Site Reference

[Comment](#)

We note this Proposed Change but remain concerned that this does not provide consistent or comprehensive scrutiny, particular in relation to cumulative impact.
 We suggest that for each PEDL area, the Councils, in conjunction with District Councils, undertake or adapt existing Landscape Character Assessments (LCA) to include a 'sensitivity assessment which considers the potential impact of each additional drilling site and advises what number could be accommodated without detriment'.
 Alternatively, whenever more than two drilling sites are approved in any PEDL area, no further planning application for additional shale gas wells on an existing or new site within the PEDL area should be considered until a LCA and sensitivity study has been undertaken to determine the total capacity (number) of drilling sites in that PEDL area that can be accommodated without detriment. This is necessary to avoid adverse cumulative impact.

MINERALS AND WASTE JOINT PLAN - SUMMARY OF MAIN REPRESENTATION ISSUES AT THE ADDENDUM OF PROPOSED CHANGES TO THE PUBLICATION DRAFT (Regulation 22 (1))

Introduction

*Following the Publication Draft of the Minerals and Waste Joint Plan in November 2016 a number of Proposed Changes were identified to the Plan. As a result, it was considered necessary to present the changes, in accordance with regulation 19: Publication of a Local Plan, for representations on Legal compliance and soundness. The additional period for receiving representation ran from 12th July 2017 for eight weeks until 6th September 2017. The following table provides a focussed summary of the main issues raised and the response by the Authorities. Any 'Actions' are highlighted in **bold** text.*

As a substantial number of representations received relate to the Proposed Changes to the Hydrocarbons (oil and gas) policies in the Joint Plan, the table is divided into four main parts:

- 1) *Key issues raised by the hydrocarbons industry;*
- 2) *Key issues raised by environment/amenity groups and individuals relating to hydrocarbons*
- 3) *Other key policy issues*
- 4) *Site allocations issues*

Hydrocarbons key issues - industry

Representation main issues	Main representors	Response by the Authorities
PC56: Amends the 'Summary of the process of hydrocarbons development' section, to clarify the expected nature of development at the exploration stage. <ul style="list-style-type: none"> • Additional text should be added to clarify that activity will be subsequent to drilling. 	Zetland Group	The proposed change was made in the 1st bullet of para. 5.107 regarding unconventional hydrocarbons from exploratory 'drilling' to exploratory 'activity' to address that whilst drilling activities are similar for conventional and unconventional hydrocarbon sources, which is reflected in the sentence before the proposed change, there may be differences in the timing of exploratory activities associated with unconventional sources. No further change proposed.
PC59: Amends the 'Summary of the process of hydrocarbons development' section to clarify the role of the Environment Agency. <ul style="list-style-type: none"> • The change does not fully reflect the role of the Environment Agency and should be expanded. 	Zetland Group, Third Energy Ltd	The additional sentence in the Addendum is not a summary of the whole role of the Environment Agency, but was proposed in response to representations regarding the Agency's role as a regulator regarding the management and disposal of returned water and NORM. No further change proposed.
PC61: Amends the 'Other regulatory regimes' section under 'Hydrocarbons' to more closely align the text with national	Third Energy Ltd	National policy is clear that local planning authorities should assume that other regulatory regimes will operate effectively and

<p>policy and guidance.</p> <ul style="list-style-type: none"> This change is not effective as it reduces the scope of other regulatory bodies by only making reference to 'control of processes or emissions' with regard to what MPAs do not have to focus on. 		<p>indicates that they should focus on the impact of the use, rather than the control of processes or emissions where these are dealt with under other pollution control regimes. In order to ensure that the impacts of a proposed use can be properly assessed through the planning process, it is necessary to ensure that the development plan, as the starting point for the determination of applications, contains relevant policies. This is particularly the case where the regulatory position is relatively complex and where important issues arise which may be relevant to both assessing the land use impacts of a proposed use and the detailed control of processes or emissions. It is therefore inevitable, and appropriate, that there will be a degree of overlap between the Plan and matters subject of specific control through other regimes. No further change proposed.</p>
<p>PC62: Amends the 'Definitions' section under 'Hydrocarbons', to clarify distinctions between development activity associated with conventional and unconventional resources.</p> <ul style="list-style-type: none"> Para 5.119 (g) should be removed as it is unjustified. The nature of activities required to extract conventional or unconventional hydrocarbons will vary and there is no difference in policy terms between extracting conventional and unconventional hydrocarbons. This change is conjecture, as opposed to a definition, which has not been validated by the Oil & Gas Authority nor industry. Amend the change to remove the implication that unconventional hydrocarbon extraction is more complex and requires a greater number of well pads/individual wells than conventional hydrocarbons, Focus on the potential scale and impact of development. Object to the definition of 'hydraulic fracturing' in para 5.119 (f) as it is contrary to Section 50 of the Infrastructure Act 2015. Incorrect and irrelevant terminology needs to be corrected 	<p>UKOOG, Egdon Resources (UK) Ltd, Cuadrilla Resources Ltd, Third Energy Ltd, INEOS Upstream Ltd</p>	<p>Development of unconventional hydrocarbons may require use of a range of techniques and the specific techniques used will depend on a range of factors. These could include; the type of unconventional resource being developed (e.g. some activities associated with underground coal gasification will require different processes to those associated with development of shale gas); the specific geology and technical considerations and; commercial factors. In terms of land use planning issues, it is considered that relevant distinctions can be drawn between the specific nature and/or scale of activities associated with certain stages of development for conventional hydrocarbons and those used for unconventional hydrocarbons. These differences may include the potential requirement for a larger number of well pads and individual wells, the volume and pressure of fluids used for any hydraulic fracturing processes and the specific requirements for any related plant and equipment and for the management of any related wastes. No further change proposed.</p>

(e.g. conventional drilling, unconventional techniques).		
<p>PC63: Amendment to the Justification Text supporting Policy M16: Key spatial principles for hydrocarbon development, to more accurately reflect the regulatory position of the Government’s Surface Protections for hydraulic fracturing.</p> <ul style="list-style-type: none"> Section 4B(1) of the Petroleum Act 1998 does not contain the definition of associated hydraulic fracturing. It is unnecessarily restrictive that the planning restrictions under the Infrastructure Act 2015 for the purpose of ‘associated hydraulic fracturing’ should also apply to other oil and gas activity. 	<p>Zetland Group, UKOOG</p>	<p>The definition of "associated hydraulic fracturing" was inserted into the Petroleum Act 1998 Section 4, as Section 4B (1), by the Infrastructure Act 2015.</p> <p>The changes proposed in the Addendum reflect the current regulatory position relating to the Government's current position with regard surface protections for hydraulic fracturing, but the changes also recognise there are some distinctions between development activity associated with conventional and unconventional resources. No further change proposed.</p>
<p>PC66: Amendment to the Justification Text supporting Policy M16: Key spatial principles for hydrocarbon development, to clarify the approach and ensure appropriate flexibility.</p> <ul style="list-style-type: none"> This change does not address the fundamental problem with Policy M16 which seeks to apply restrictions to hydraulic fracturing for conventional gas resources. The change implies that there may be restrictions on unconventional fracturing operations over and above the Infrastructure Act 2015. The term ‘unreasonably’ in the change is not considered acceptable because it replaces objectivity with subjectivity in decision making. The application of new regulations and proposed surface protections to only high volume fracturing is contrary to the earlier statement that it is not considered appropriate to distinguish between this and lower levels of activity. This is contrary to Section 50 of the Infrastructure Act 2015. 	<p>Egdon Resources (UK) Ltd, INEOS Upstream Ltd, Cuadrilla Resources Ltd,</p>	<p>It is not the intention of the Plan to unreasonably restrict activity typically associated with production of conventional resources, such as well stimulation techniques where any fracturing activity would involve substantially lower volumes and pressures and the clarification in para 5.124 aims to ensure appropriate flexibility in the Plan. No further change proposed.</p>
<p>PC67: Amendment to the Justification Text supporting Policy M16: Key spatial principles for hydrocarbon development, to reflect the potential position.</p>	<p>INEOS Upstream Ltd</p>	<p>It is considered that the text illustrates and reflects the potential position where circumstances may arise such that the presence of equipment and activity on site may vary over time and which is therefore relevant to the consideration of, for example, impact on</p>

<ul style="list-style-type: none"> The change creates uncertainty for the decision maker rather than allowing for objective assessment. 		<p>amenity. No further change proposed.</p>
<p>PC70: Clarifies the proposed approach in Policy M17: Other spatial and locational criteria applying to hydrocarbon development.</p> <ul style="list-style-type: none"> This change fails to address the fundamental issue that there is no justification for setting a well pad density limit within a PEDL area. Cumulative impacts would be taken into account when planning applications are determined. 	<p>Egdon Resources (UK) Ltd</p>	<p>An objective within Policy M17 is ensuring that unacceptable cumulative effect does not arise. However, it is recognised that bearing in mind the very early stage of development of the industry in this area there is a need for a degree of appropriate flexibility. The text in 5.137, including the Addendum, regarding well pad density provides an indication of the approach that could be taken to preventing unacceptable cumulative impact, but, as acknowledged in the last sentence of the paragraph PEDL boundaries are based on an OS grid and do not reflect other considerations and constraints. Therefore, the location of existing or planned developments in the vicinity of a proposal will also be considered in assessing cumulative impact under this Policy. No further change proposed.</p>
<p>PC71: Amendment to the Justification Text supporting Policy M17: Other spatial and locational criteria applying to hydrocarbon development.</p> <ul style="list-style-type: none"> This change restates controls that are within the remit of other regulators. If the MPA wishes to explain how these are applied to hydrocarbon development this should be done through a Supplementary Planning Document. 	<p>INEOS Upstream Ltd</p>	<p>National policy is clear that local planning authorities should assume that other regulatory regimes will operate effectively and indicates that they should focus on the impact of the use, rather than the control of processes or emissions where these are dealt with under other pollution control regimes. In order to ensure that the impacts of a proposed use can be properly assessed through the planning process, it is necessary to ensure that the development plan, as the starting point for the determination of applications, contains relevant policies. This is particularly the case where there the regulatory position is relatively complex and where important issues may arise which may be relevant to both assessing the land use impacts of a proposed use and to the detailed control of processes or emissions. It is therefore inevitable, and appropriate, that there will be a degree of overlap between the Plan and matters subject of specific control through other regimes. No further change proposed.</p>
<p>PC72 & PC73: Amendment to the Justification Text supporting Policy M17: Other spatial and locational criteria applying to hydrocarbon development, to clarify the approach to</p>	<p>Third Energy Ltd, INEOS Upstream Ltd, Egdon</p>	<p>Policy M17 of the Plan seeks to address the potential for cumulative impact but doesn't set out any absolute limit on well pad or well numbers, recognising current uncertainty about the precise</p>

<p>preventing unacceptable cumulative impact.</p> <ul style="list-style-type: none"> This change is not effective as this arbitrary limit on well pad density is unnecessarily restrictive and without justification. The geographical spacing, scale, type of development and topographical and surface characteristics should be considered in the assessment of a proposal. 	<p>Resources (UK) Ltd, Cuadrilla Resources Ltd, UKOOG, Zetland Group</p>	<p>development model which industry may seek to follow and that a range of local circumstances are likely to arise and that bearing in mind the very early stage of development of the industry in this area there is a need for a degree of appropriate flexibility. The overarching objective of the policy is to prevent unacceptable cumulative impact. It is acknowledged that planning applications will need to be determined on a case by case basis and that cumulative impact, including the location of existing or planned developments in the vicinity of a proposal, may also be addressed via Environmental Impact Assessment, where this is required. However, it is considered important that the Plan sets out policy to provide a framework for addressing this potentially important issue. No further change proposed.</p>
<p>PC76: Amendment to the Justification Text supporting Policy M17: Other spatial and locational criteria applying to hydrocarbon development, to more accurately reflect the available evidence.</p> <ul style="list-style-type: none"> The reference to ‘induced seismic activity’ should be deleted as this is the responsibility of the OGA. The change is not effective as any development will be required to demonstrate that the geology is suitable via a technical study. 	<p>INEOS Upstream Ltd, Egdon Resources (UK) Ltd, Third Energy Ltd, UKOOG,</p>	<p>Whilst it is acknowledged that the Oil and Gas Authority has in place specific measures relating to the control of seismic risk, there is potential for this issue to give rise to wider considerations of local amenity, which is a matter relevant to planning and is therefore appropriately referenced in the Plan. No further change proposed.</p>
<p>PC79: Amends Policy M18: Other specific criteria applying to hydrocarbon development, to more accurately reflect the relevant regulatory requirements relating to decommissioning of wells.</p> <ul style="list-style-type: none"> This change is not effective as the decommissioning of wells is undertaken in line with regulatory requirements of the HSE, EA and OGA. 	<p>Third Energy Ltd,</p>	<p>The wording of the Policy was revised to delete the reference to the need for decommissioning where wells are suspended pending further hydrocarbon development, to more accurately reflect the regulatory position and help ensure consistency with other legislative processes. National policy is clear that local planning authorities should assume that other regulatory regimes will operate effectively and that they should focus on the impact of the use. In order to ensure that the impacts of a proposed use can be properly assessed through the planning process, it is necessary to ensure that the development plan, as a starting point for the determination of applications, contains relevant policies. This is</p>

		particularly the case where the regulatory position is relatively complex and where important issues may arise which may be relevant to both assessing the land use impacts of a proposed use and to the detailed control of processes or emissions. It is therefore inevitable, and appropriate that there will be a degree of overlap between the Plan and matters subject of specific control through other regimes. No further change proposed.
Hydrocarbons key issues - environment/amenity groups and individuals		
Representation main issues	Main representors	Response by the Authorities
<p>PC56 & PC57: Amends the 'Summary of the process of hydrocarbons development' section to clarify the expected nature of development at exploration and production stages.</p> <ul style="list-style-type: none"> Exploratory work should be limited to a defined period otherwise excessive nuisance could be caused. 	Frack Free Ryedale	Whilst this concern is noted it is considered that the suggested approach would lack flexibility to reflect a wide range of potential circumstances that apply to a specific proposal in the Plan area and it is considered that, in combination, the policies provide for a high degree of protection of local communities, taking into account also the role of other relevant regulators. No further change proposed.
<p>PC58: Amends the 'Summary of the process of hydrocarbons development' section to clarify the expected nature of development that could come forward.</p> <ul style="list-style-type: none"> This change appears to contradict the description of the exploration stage in para 5.107, which states that this is an 'intense activity' which for unconventional hydrocarbons may take 'considerably longer' than '12 to 25 weeks'. Therefore, the proposed change should be amended to reflect this. 	Frack Free Ryedale	This is not agreed. It is considered that the text, together with other relevant paragraphs, including 5.107 make it clear that some activities can be short-term, some intensive, some temporary, some intermittent and some may last for longer periods. The activities will vary with the nature of the development and the circumstances of the individual site. No further change proposed.
<p>PC59: Amends the 'Summary of the process of hydrocarbons development' section to clarify the role of the Environment Agency.</p> <ul style="list-style-type: none"> The change should be expanded to include reference to para 112 of the Minerals PPG, stating that onsite storage of returned water and associated traffic movements is a matter for the MPA. 	Frack Free Ryedale	The suggested addition is not necessary as paragraph 5.112 already refers, in the last sentence of the paragraph, to 'where matters subject to regulation through other regimes also give rise to land use implications, the Authorities will seek to address them through the planning process'. No further change proposed.

<p>PC61: Amends the 'Other regulatory regimes' section under 'Hydrocarbons' to more closely align the text with national policy and guidance.</p> <ul style="list-style-type: none"> Expand the change to state that 'the MPA must be satisfied that issues will be adequately addressed by the relevant regulatory body'. 	<p>Frack Free Ryedale</p>	<p>National policy is clear that local planning authorities should assume that other regulatory regimes will operate effectively and indicates that they should focus on the impact of the use, rather than the control of processes or emissions where these are dealt with under other pollution control regimes. No further change proposed.</p>
<p>PC62: Amends the 'Definitions' section under 'Hydrocarbons' to clarify distinctions between development activity associated with conventional and unconventional resources.</p> <ul style="list-style-type: none"> This change should be removed and the previous text which defines conventional and unconventional hydrocarbons, as provided in the Publication Draft, should remain as this provided greater clarity to the decision maker. Utilise the Minerals PPG definition of conventional hydrocarbons setting out that higher geology reservoirs often mean sandstone and limestone. Define the terms 'long term' and 'short term' as set out in the Minerals PPG, in addition to 'significant harm'. Expand the change to para 5.119 (d) to include 'for example where the reservoir is sandstone or limestone' to be in accordance with national policy. 	<p>Individual, CPRE (North Yorkshire Region), Frack Free Ryedale</p>	<p>Development of unconventional hydrocarbons may require use of a range of techniques and the specific techniques used will depend on a range of factors. These could include; the type of unconventional resource being developed (for example some activities associated with underground coal gasification will require different processes to those associated with development of shale gas); the specific geology and technical considerations and; commercial factors. In terms of land use planning issues, it is considered that relevant distinctions can be drawn between the specific nature and/or scale of activities associated with certain stages of development for conventional hydrocarbons and those used for unconventional hydrocarbons. These differences may include the potential requirement for a larger number of well pads and individual wells, the volume and pressures of fluids used for any hydraulic fracturing processes and the specific requirements for any related plant and equipment and for the management of any related wastes. Given the nature of hydrocarbons and that development can vary on a site by site basis, it is not considered appropriate to provide separate definitions for short-term or long-term to those used in the Minerals PPG and it is not necessary to further expand 5.119 d) regarding the nature of the geological reservoirs. No further change proposed.</p>
<p>PC63: Amendment to the Justification Text supporting Policy M16: Key spatial principles for hydrocarbon development, to more accurately reflect the regulatory position of the Governments Surface Protections for hydraulic fracturing.</p>	<p>Frack Free Ryedale, Individuals</p>	<p>The changes proposed in the Addendum reflect the current regulatory position relating to the Government's current position with regard surface protections for hydraulic fracturing, but the changes also recognise there are some distinctions between development activity associated with conventional and</p>

<ul style="list-style-type: none"> Expand change to include text stating that as similar environmental impacts occur when hydraulic fracturing occurs below the defined threshold all proposals in protected areas will be treated the same in policy terms. The use of a '1,000 cubic metres of fluid' threshold is not effective and the Plan's policies should apply to all hydraulic fracturing proposals Query what criteria will be used to judge how an operator may 'persuasively demonstrate why requiring such a consent would not be appropriate'. Defined, robust and objective criteria should be used to ensure consistency. This change should be clear that the Plan will utilise the definition of hydraulic fracturing in para 5.119 (f) which is consistent with National Policy and not that provided in the Infrastructure Act 2015. 		<p>unconventional resources. It is not necessary to replicate in paragraph 5.122, matters addressed in other paragraphs, such as 5.124. No further change proposed.</p>
<p>PC66: Amendment to the Justification Text supporting Policy M16: Key spatial principles for hydrocarbon development, to clarify the approach and ensure appropriate flexibility.</p> <ul style="list-style-type: none"> This change should not be included, and the Plan should utilise the definition of hydraulic fracturing in para 5.119 (f) which is consistent with National Policy. 	<p>Individual</p>	<p>It is not the intention of the Plan to unreasonably restrict activity typically associated with production of conventional resources, such as well stimulation techniques where any fracturing activity would involve substantially lower volumes and pressures and the clarification in paragraph 5.124 aims to ensure appropriate flexibility in the Plan. No further change proposed.</p>
<p>PC68: Amendment to the Justification Text supporting Policy M16: Key spatial principles for hydrocarbon development, to reflect the presence of other potentially relevant designations in district local plans.</p> <ul style="list-style-type: none"> The text of this change should be included in the wording of Policy M16 or M17. The change should be amended to refer to the 'appropriate body responsible' rather than NYCC to ensure the National Infrastructure Planning body takes account of these policies if responsible for determining the proposal. 	<p>Malton Town Council, South Hambleton Shale Advisory Group, Individuals, Barugh (Great & Little) Parish Council, Habton Parish Council, Frack Free Malton & Norton, Frack Free Ryedale</p>	<p>It is not considered that specific reference is required within Policy M16 as Policy D06 of the Plan states that all landscapes will be protected from the harmful effects of development, and that they will be permitted where it can be demonstrated that there will be no unacceptable impact on the quality and/or character of the landscape, having taken into account any proposed mitigation measures. This would ensure that appropriate consideration is given to impacts on landscapes within Ryedale (or elsewhere within the Plan area) which are not nationally designated for protection. Furthermore, Policy D08 specifically recognises the significance of the archaeological resource of the Vale of Pickering, the Yorkshire Wolds and the North York Moors and Tabular Hills and indicates</p>

<ul style="list-style-type: none"> • The change should be amended to refer specifically to employment and economic policies in a local plan because under any other planning context surface development for hydraulic fracturing would be classed as employment or economic development. • The change should be expanded to include having regard to Landscape Character Assessments. • Clarify what is intended by the term ‘regard will be had to the requirements of associated local plan policy’. • Ensure areas high in landscape value (i.e. Vale of Pickering and Yorkshire Wolds) are protected. 		<p>that particular regard will be had to conserving the distinctive character and sense of place in these areas. In combination these policies will help ensure that distinctive landscape character, including historic landscape character, in Ryedale is protected where minerals or waste development is proposed. Furthermore, the Ryedale Plan itself forms a part of the statutory development plan and existing Policy SP13 of that Plan may be relevant to proposals for minerals and waste development, depending on the circumstances. No further change proposed.</p>
<p>PC70: Clarifies the proposed approach in Policy M17: Other spatial and locational criteria applying to hydrocarbon development.</p> <ul style="list-style-type: none"> • The change should not be accepted as it removes the need to consider planned well pads, which is important when considering the overall plan for the area and cumulative impacts of both planned and permitted sites. • The wording of the Policy should be more robust to consider the density of hydraulic fracturing sites. 	Individuals	<p>An objective within Policy M17 is ensuring that unacceptable cumulative effect does not arise. However, it is recognised that bearing in mind the very early stage of development of the industry in this area there is a need for a degree of appropriate flexibility. The text in 5.137, including the Addendum, regarding well pad density provides an indication of the approach that could be taken to preventing unacceptable cumulative impact, but, as acknowledged in the last sentence of the paragraph PEDL boundaries are based on an OS grid and do not reflect other considerations and constraints. Therefore, the location of existing or planned developments in the vicinity of a proposal will also be considered in assessing cumulative impact under this Policy. No further change proposed.</p>
<p>PC71: Amendment to the Justification Text supporting Policy M17: Other spatial and locational criteria applying to hydrocarbon development, to reflect the potential for vehicle movements to impact on air quality.</p> <ul style="list-style-type: none"> • The text of this change should be included in the wording of Policy M17. 	Friends of the Earth (Y&H and the NE)	<p>It is not considered that specific references to matters such as transport and air quality are required within the individual mineral policies, including those relating to hydrocarbons, as the policies of the Plan should be considered as a whole, including Policy D02 (local amenity and cumulative effects) and Policy D03 (transport of minerals and waste and associated traffic impacts). This will enable the consideration of the circumstances of developments such that there will be no unacceptable impact having taken into account any proposed mitigation measures. No further change</p>

<p>PC73: Amendment to the Justification Text supporting Policy M17: Other spatial and locational criteria applying to hydrocarbon development, to clarify the approach to preventing unacceptable cumulative impact.</p> <ul style="list-style-type: none"> Expand the change to include, in addition to green belt, areas of local landscape importance designated in District/Borough Local Plans. 	<p>Frack Free Ryedale</p>	<p>proposed.</p> <p>This matter is already addressed in Policy D06 of the Plan, which states that all landscapes will be protected from the harmful effects of development, and that they will be permitted where it can be demonstrated that there will be no unacceptable impact on the quality and/or character of the landscape, having taken into account any proposed mitigation measures. In the two-tier part of the Plan area the District and Borough Local Plans form part of the statutory development plan and therefore where areas of local landscape importance are identified in local plans and are relevant to a proposal under consideration these will need to be taken into account in determining the acceptability of the proposals. No further change proposed.</p>
<p>PC75: Amendment to the Justification Text supporting Policy M17: Other spatial and locational criteria applying to hydrocarbon development, to improve consistency with national policy and guidance.</p> <ul style="list-style-type: none"> The change is not in conformity with national guidance as developers should aim to reduce noise levels to a minimum level, below the thresholds set out in guidance, not meet them as the change suggests. In accordance with para 21 of the Minerals PPG, the change should be expanded to require applicants to provide evidence if noise levels cannot be reduced without onerous burden (i.e. noise level monitoring). Expand the change to require all well completions to be 'green' completions (i.e. no flaring allowed) 	<p>CPRE (North Yorkshire Region), Frack Free Ryedale</p>	<p>National policy requires that the issue of noise be addressed in the Plan. The Plan sets out a comprehensive range of criteria, including regarding noise and giving consideration to the nature of the proposed development (which could include whether or not flaring is involved), to ensure a robust approach to protection of the amenity whilst providing appropriate flexibility for development in line with national policy. No further change proposed.</p>
<p>PC79: Amends Policy M18: Other specific criteria applying to hydrocarbon development, to more accurately reflect the relevant regulatory requirements relating to decommissioning of wells.</p> <ul style="list-style-type: none"> Do not support this change as this will lead to wells 	<p>Frack Free Ryedale, Individual</p>	<p>The wording of the Policy was revised to delete the reference to the need for decommissioning where wells are suspended pending further hydrocarbon development, to more accurately reflect the regulatory position and help ensure consistency with other legislative processes. National policy is clear that local planning authorities should assume that other regulatory regimes will</p>

<p>remaining suspended in the hope of becoming commercially viable, and used as a reason to extend permissions in a speculative way.</p> <ul style="list-style-type: none"> Wells should be decommissioned promptly following completion of the operational phase and should not be suspended pending further planning applications. Flaring at sites, should be considered an onsite waste operation, and not be permitted. 		<p>operate effectively and that they should focus on the impact of the use. In order to ensure that the impacts of a proposed use can be properly assessed through the planning process, it is necessary to ensure that the development plan, as a starting point for the determination of applications, contains relevant policies. This is particularly the case where the regulatory position is relatively complex and where important issues may arise which may be relevant to both assessing the land use impacts of a proposed use and to the detailed control of processes or emissions. It is therefore inevitable, and appropriate that there will be a degree of overlap between the Plan and matters subject of specific control through other regimes. No further change proposed.</p>
<p>PC80: Amendment to the Justification Text supporting Policy M18: Other specific criteria applying to hydrocarbon development, to clarify that water arising on site may not always constitute waste.</p> <ul style="list-style-type: none"> Do not support this change as removal of the term ‘waste’ implies that water returned via a borehole may be reused instead of disposed of which is contrary to para 110 & 143 of the NPPF (i.e. presents dangers to the environment). The change should be amended to clarify that returned water would require treatment or processing. The change should refer to the potential increase in noise should onsite treatment of waste be permitted. 	<p>Individual, Frack Free Ryedale</p>	<p>In view of the uncertainty which exists in relation to future management of waste from any shale gas industry it is considered important to ensure that implications of on-site water management as well as off-site management requirements are properly addressed. The submission of a water management plan provides a mechanism for this. It is recognised that applications may also need to be accompanied by a transport assessment and that there could be some degree of overlap but this is considered reasonable bearing in mind the potential for large volumes of waste water requiring transport off site. Paragraph 5.154 of the supporting text to Policy M18 already indicates that a waste water management plan will need to address arrangements for the safe and sustainable management and transport of waste. Issues such as noise are dealt with by Policy D02. No further change proposed.</p>
<p>PC81: Amendment to the Justification Text supporting Policy M18: Other specific criteria applying to hydrocarbon development, to clarify the position.</p> <ul style="list-style-type: none"> The change should reference the additional impacts to noise levels as a result of site operations (i.e. pumping wastewater). 	<p>Frack Free Ryedale</p>	<p>Whilst this concern about noise is noted it is considered that, in combination, the policies provide for a high degree of protection of local communities and the environment, taking into account also the role of other relevant regulators. No further change proposed.</p>
<p style="text-align: center;">Other key policy issues</p>		

Representation main issues	Main representors	Response by the Authorities
<p>PC50: Clarifies the proposed approach in Policy M06: Landbanks for Crushed Rock:</p> <ul style="list-style-type: none"> • Representations have suggested that the Policy is not in accordance with Para 145 of the NPPF, insofar as the Policy uses the wording ‘a minimum overall landbank of 10 years’ whereas national policy states ‘the maintenance of at least 10 years’. • Representations have suggested that the Policy is not in accordance with Para 144 of the NPPF, insofar as the Policy does not include the term ‘as far as practical’ when referring to sourcing new crushed rock reserves from outside of the National Park and AONBs. 	<p>Minerals Products Association, Tarmac</p>	<p>It is considered that there is no material difference between maintenance of a minimum landbank of 10 years as stated in the policy, and the maintenance of a landbank of 'at least 10 years'. It is not considered necessary to refer, in the second paragraph of the Policy, to sourcing crushed rock from outside the National Parks and AONBs as far as practicable as it is not expected that there will be a need to seek to develop resources in these protected areas during the plan period in order to maintain the landbank and the policy as currently worded provides greater clarity on the approach the relevant Mineral Planning Authorities intend to take. No further change proposed.</p>
<p>PC53: Amendments to the Justification Text supporting Policy M12: Continuity of supply of silica sand, to reflect proposals for the realignment of the A59:</p> <ul style="list-style-type: none"> • The wording is not justified, positively prepared or effective and should be revised to clarify that the design of the A59 realignment should take into account Blubberhouses Quarry. 	<p>Hanson UK</p>	<p>Progress with determination of the planning application at Blubberhouses Moor is a separate, although relevant, matter to progress with the development of the policies in the Joint Plan. Progress with the Joint Plan has not been an influence on the determination period for the application.</p> <p>The Addendum reflects that realigning the A59 at Kex Gill to the other side of the valley is part of North Yorkshire County Council’s strategic transport plan to improve east to west connections between the east coast and Humber ports and Lancashire, and that investigations were occurring towards finding a solution to the existing problems with the stability of the road in the vicinity of Blubberhouses. Subsequent to the closure of the Addendum consultation, in September 2017 the County Council as Highway Authority has launched a public consultation based on four route corridors for the realigned road.</p> <p>Whilst the suggested amendment is noted, it is considered that the Addendum wording provides greater flexibility to deal with the progression of the quarry in the context of both the existing A59</p>

		and the, as yet, draft proposals for a realignment of the road. No further change proposed.
<p>PC84: Addition of link to Policy W10 in the key links to other policies section of Policy S03: Waste management facility safeguarding:</p> <ul style="list-style-type: none"> Policy S03 is too restrictive and does not take account of the fact that waste uses on safeguarded sites may prove unviable. 	Harworth Estates	<p>The Policy's purpose is not to prevent to other development on a safeguarded waste site, but to ensure that the presence of the safeguarded site is taken into account in decision making on other forms of development. The Policy states that the need for alternative development may outweigh the need to safeguard the site and the supporting text, at para. 8.29 already clarifies that the purpose of safeguarding sites in the MWJP is not to prevent other forms of development from taking place but to ensure that the need to maintain important infrastructure is factored into decision-making for other forms of development. This represents an appropriate and proportionate approach reflecting the requirements of national policy.</p> <p>However, it is considered that the addition of the suggested sentence "WHERE A SITE IS NOT IN USE, VIABILITY ISSUES WILL BE RELEVANT TO CONSIDERING WHETHER THERE IS A REASONABLE PROSPECT OF THE SITE BEING USED FOR WASTE MANAGEMENT IN THE FORSEEABLE FUTURE." as a minor modification to para. 8.29, prior to the final sentence, would help further clarify this pragmatic approach.</p>
<p>PC85: Amendment to the Justification Text supporting Policy S03: Waste management facility safeguarding, to emphasise the need for a pragmatic approach to implementing safeguarding requirements.</p> <ul style="list-style-type: none"> The proposed change is not effective as it does not adequately address situations where new proposals are proposed or within an emerging development plan, therefore the word 'extant' should be removed. 	Harworth Estates	<p>The Addendum change to para 8.30. was proposed to emphasise the need for a pragmatic approach to implementing safeguarding requirements and it is considered that the deletion of 'extant' from the first sentence of the proposed change, resulting in '... mine sites in the Plan area, there are other [extant] proposals for redevelopment ...' would be a minor modification that would enable the authorities involved to take a constructive and pragmatic approach to all proposals whether extant or proposed in the future.</p>
<p>PC87: Amendment to the Justification Text supporting Policy S04: Transport infrastructure safeguarding, to emphasise the linkage between marine and terrestrial planning.</p>	Harworth Estates	<p>It is agreed that where a site is not in use, viability issues will be relevant to considering whether there is a reasonable prospect of the site being used for minerals or waste transport in the</p>

<ul style="list-style-type: none"> Policy S04 is not sound as it does not take account of the fact that waste uses on safeguarded sites may prove unviable. 		<p>foreseeable future and the addition of the suggested text WHERE A SITE IS NOT IN USE, VIABILITY ISSUES WILL BE RELEVANT TO CONSIDERING WHETHER THERE IS A REASONABLE PROSPECT OF THE SITE BEING USED FOR MINERALS OR WASTE TRANSPORT IN THE FORSEEABLE FUTURE to the end of paragraph 8.34 would be a minor modification that would enable the authorities involved to take a constructive and pragmatic approach.</p>
<p>PC88: Amendment to the Safeguarding Exemption Criteria to reflect the safeguarding of minerals and waste transport infrastructure</p> <ul style="list-style-type: none"> The revised bullet point should include reference to 'emerging plan allocations where the minerals and waste planning authority has raised no safeguarding concerns during consultation' 	<p>Harworth Estates</p>	<p>The Addendum change to the 12th bullet point was proposed to reflect that minerals and waste transport infrastructure is also safeguarded in the plan and is considered to still be appropriate. However, it is considered that the addition of the words, OR, IN THE CASE OF AN EMERGING LOCAL PLAN ALLOCATION, WHERE THE MINERALS AND WASTE PLANNING AUTHORITY HAS RAISED NO SAFEGUARDING CONCERNS DURING CONSULTATION ON THE EMERGING PLAN ALLOCATION after the words 'safeguarding requirements' would further support the pragmatic approach to implementing safeguarding requirements where an overlap with other types of proposed development occurs.</p>
<p>PC90: Amendment to introductory text for Policy D04: Development affecting the North York Moors National Park and the AONBs, to clarify the purposes of the AONB designation.</p> <ul style="list-style-type: none"> The term 'particular regard should be paid to promoting sustainable forms of social and economic development that in themselves conserve and enhance the environment' should also apply within the AONB buffer zone in Policy M16 (d) (i). 	<p>South Hambleton Shale Advisory Group</p>	<p>Whilst this concern is noted, Policy M16 d) i) provides policy to protect against impacts outside but near to AONBs and would operate in association with Policy D04 Part 3) to further protect the setting of such areas. No further change proposed.</p>
<p>PC91: Amendment to Justification Text supporting Policy D06: Landscape, to reflect the presence of other potentially relevant designations in District local plans.</p> <ul style="list-style-type: none"> This change does not provide consistent scrutiny. 	<p>South Hambleton Shale Advisory Group</p>	<p>Policy D06 of the Plan states that all landscapes will be protected from the harmful effects of development, and that they will be permitted where it can be demonstrated that there will be no unacceptable impact on the quality and/or character of the landscape, having taken into account any proposed mitigation</p>

<p>Landscape Character Assessments should be undertaken which include sensitivity assessments considering potential impacts of additional drilling sites and what number could be accommodated without detriment to avoid adverse cumulative impact.</p>		<p>measures. In the two-tier part of the Plan area the District and Borough Local Plans form part of the statutory development plan and therefore where areas of local landscape importance are identified in local plans and are relevant to a proposal under consideration these will need to be taken into account in determining the acceptability of the proposals. No further change proposed.</p>
<p>PC95: Amends Policy D10: Reclamation and Afteruse, to more closely reflect the requirements of national policy.</p> <ul style="list-style-type: none"> The change does not go far enough in terms of consultation with communities and proof of reasonable low impacts on the community and environment. 	<p>Individual</p>	<p>Whilst the concerns are noted it is considered that, in combination, the policies set out a robust approach to consultation, information requirements and the protection provided for the environment (including water resources and air quality) and for local communities, taking into account as well the role of other relevant regulators, such as the Environment Agency and the Oil and Gas Authority. No further change proposed.</p>
<p>PC96: Amends Policy D10: Reclamation and Afteruse, to clarify the proposed approach and reflect the diminishing significance of biodiversity action plans.</p> <ul style="list-style-type: none"> 'benefits at a landscape scale' can often only be delivered with large areas of land which may not be under the control of a developer and as such this policy cannot be effectively achieved. Therefore, reference to this should be removed. 	<p>Minerals Products Association, Tarmac</p>	<p>Whilst it is accepted that delivery of landscape scale benefits may not often be practicable in the Plan area, it is considered that the potential benefits of such an approach, where it can be delivered, justify the inclusion of this element of the Policy. No further change proposed.</p>
<p>Site allocation issues</p>		
<p>Representation main issues</p>	<p>Main representors</p>	<p>Response by the Authorities</p>
<p>PC102: Revision of site boundary - MJP21: Land at Killerby</p> <ul style="list-style-type: none"> Revision of the site boundary, to exclude land nearest the Killerby Hall Stable Block Listed Building, is opposed. Historic England's assertion, that the previous site boundary would 'be likely to result in harm to elements which contribute to the significance of a Listed Building' (i.e. Stable Block) is not justified. 	<p>Tarmac, Minerals Products Association</p>	<p>The Proposed Change of reducing the site area has been proposed to address a specific concern raised by Historic England, as statutory consultee regarding historic issues, concerning the potential harm to the setting on the listed building that could arise from the proposed development of the field closest to the listed building. However, it is acknowledged that, as pointed out by the objector, no objections have been raised by Historic England to the site design proposed in the planning application (ref.</p>

		NY/2010/0356/ENV) for which in April 2017 the Planning & Regulatory Functions Committee resolved to grant planning permission subject to the completion of a S106 agreement (which is currently being prepared). No further change proposed.
<p>PC104: Revision of site boundary - MJP17: Land to South of Catterick</p> <ul style="list-style-type: none"> Revision of the site boundary, to exclude land nearest to Rudd Hall and Ghyll Hall Listed Buildings, is opposed. Historic England's assertion, that the previous site boundary would 'be likely to result in harm to elements which contribute to the significance of two Listed Buildings' (i.e. Rudd Hall and Ghyll Hall) is not justified. 	Tarmac, Minerals Products Association	The Proposed Change of reducing the site area has been proposed to address a specific concern raised by Historic England, as statutory consultee regarding historic issues, concerning the potential harm to the setting on the two listed buildings that could arise from the proposed development. No further change proposed.
<p>PC106: Amendment to Key Sensitivities and Development Requirements - MJP55: Land adjacent to former Escrick brickworks</p> <ul style="list-style-type: none"> A full archaeological assessment should be required prior to development 	CPRE (North Yorkshire Region)	The support for the proposed addition, in the Addendum, of the reference to the SINC is noted. With regard to an archaeological assessment, the development requirements listed in Appendix 1 to the Publication Draft is not, as is explained at paragraph 1.9 in the introduction text to that appendix, an exhaustive list. PC98 and PC99 were proposed in relation to known significant heritage assets at those sites. The position at the Escrick MJP55 and WJP06 site is not the same and it is considered that the existing bullet point regarding 'appropriate site design and landscaping to mitigate impact on: heritage assets (archaeological remains, Escrick Conservation Area, Listed Buildings ... Escrick Park) is sufficient, as, at the point of an application any applicant should be following the guidance regarding archaeology as provided in the National Planning Practice Guidance. No further change proposed.
<p>PC107: Amendment to Key Sensitivities and Development Requirements - WJP06: Land adjacent to former Escrick brickworks, Escrick</p> <ul style="list-style-type: none"> A full archaeological assessment should be required prior to development 	CPRE (North Yorkshire Region)	The support for the proposed addition, in the Addendum, of the reference to the SINC is noted. With regard to an archaeological assessment, the development requirements listed in Appendix 1 to the Publication Draft is not, as is explained at paragraph 1.9 in the introduction text to that appendix, an exhaustive list. PC98 and PC99 were proposed in relation to known significant heritage

		<p>assets at those sites. The position at the Escrick MJP55 and WJP06 site is not the same and it is considered that the existing bullet point regarding 'appropriate site design and landscaping to mitigate impact on: heritage assets (archaeological remains, Escrick Conservation Area, Listed Buildings ... Escrick Park) is sufficient, as, at the point of an application any applicant should be following the guidance regarding archaeology as provided in the National Planning Practice Guidance. No further change proposed.</p>
