Data sources: NOMIS (National On-line Manpower Information System) and Taylor Associates									12 mnth av:	1.53	1.24

Notes:

1. Table: 'MA' denotes moving average: each monthly rate is an average figure of the previous twelve months.

This smoothes out some of the monthly swings in unemployment, producing a clearer trend line. For information, raw percentage rates are shown in the '%' column after each area.

2. Because official unemployment rates are now calculated on a residents basis for areas below regions, the York % rate is estimated for November 2002 onwards when workplace-based rates ceased, once again, to be available.

3. Members should be aware that the measure of unemployment used here is the narrow, and largely unsatisfactory, Claimant Count, which measures only those people receiving benefits while they are unemployed.

It is used here to ensure commonality across the three areas shown and should be seen as a proxy measure of economic activity rather than as a measure of the true extent of the problem of unemployment for local people.

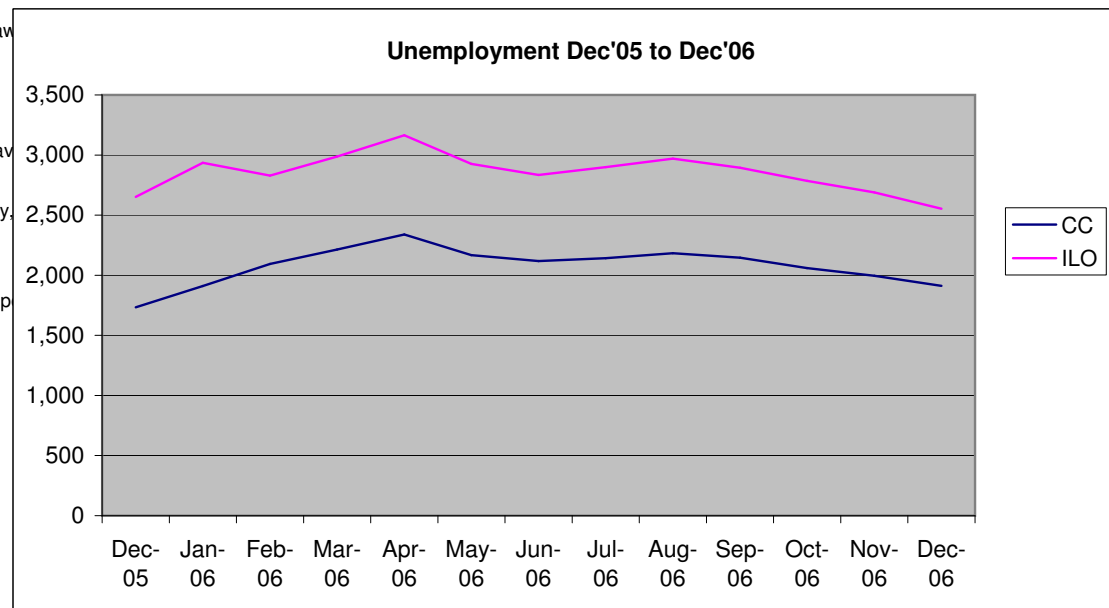

4. The shaded columns demonstrate the two unemployment performance indicators used by the Council,

5. Graph: This shows the numbers of people seeking work in the city, the ILO measure, as the higher line. The lower, broken line, charts the narrower Claimant Count measure.

6. Members should also be aware that official unemployment data is always subject to revision, rounding of figures to one decimal place in the table may appear to suggest arithmetical errors.

7. York workforce estimated at 113,000 source: Jobs Density 2003 ONS

8. Economically active used as the resident workforce denominator: 91,400 Source ONS
