

Information Received in Relation to the First Key Objective

(i) To look at statistical evidence collected by the School Health Team in relation to NPI55 & NPI56 to discover the extent of childhood obesity in the City

1. At a meeting of the Health Overview & Scrutiny Committee on 2nd December 2009 Members received a presentation on childhood obesity from four key partners namely:
 - The Children's Trust Unit Manager
 - The Associate Director of Public Health & Locality Director for York
 - The Health Improvement Manager (obesity) – NHS North Yorkshire & York
 - The Deputy Directorate Manager for Child Health – York Hospitals Foundation Trust

2. The presentation provided the following background information:
 - Children's Trust Units and the Children & Young People's Plan
 - Tackling obesity through partnerships
 - The Healthy Weight, Active Lives Sub Group¹
 - There was a complex multifaceted system of determinants that influenced obesity²

3. The presentation also set out the following information, specifically in relation to Key Objective (i) of the remit, regarding local data from the National Child Measurement Programme (NCMP)

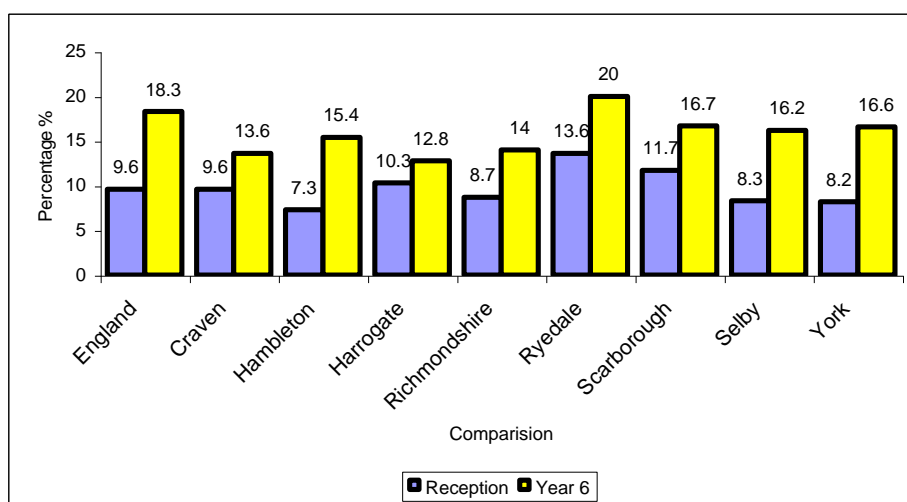

Figure 1 -
NCMP,
District level
prevalence
2007/08 – all
children at
risk of being
obese

¹ Further information on this is set out under Key Objective (iv) within this report

² Further information on this is set out under Key Objective (iii) within this report

	2006/07	2007/08	2008/09
	Obese	Obese	Obese
Year 6	15.6	16.6	16.7
Reception	8.4	8.2	6.7

Figure 9 –
Latest Available Data from the NCMP

- As can be seen from the data in Figure 9 of this annex, obesity in Year 6 has risen 0.1% and decreased 1.5% in Reception Year. A different cohort of children is used each year so the figures do not relate to the same children year on year.
- The Department of Health had provided funding to carry out Healthy Weight, Healthy Lives Market Segmentation. Information was drawn from 12,000 York families and is illustrated in Figures 10 and 11 below.

Figure 10 - Healthy Weight, Healthy Lives Market Segmentation - York

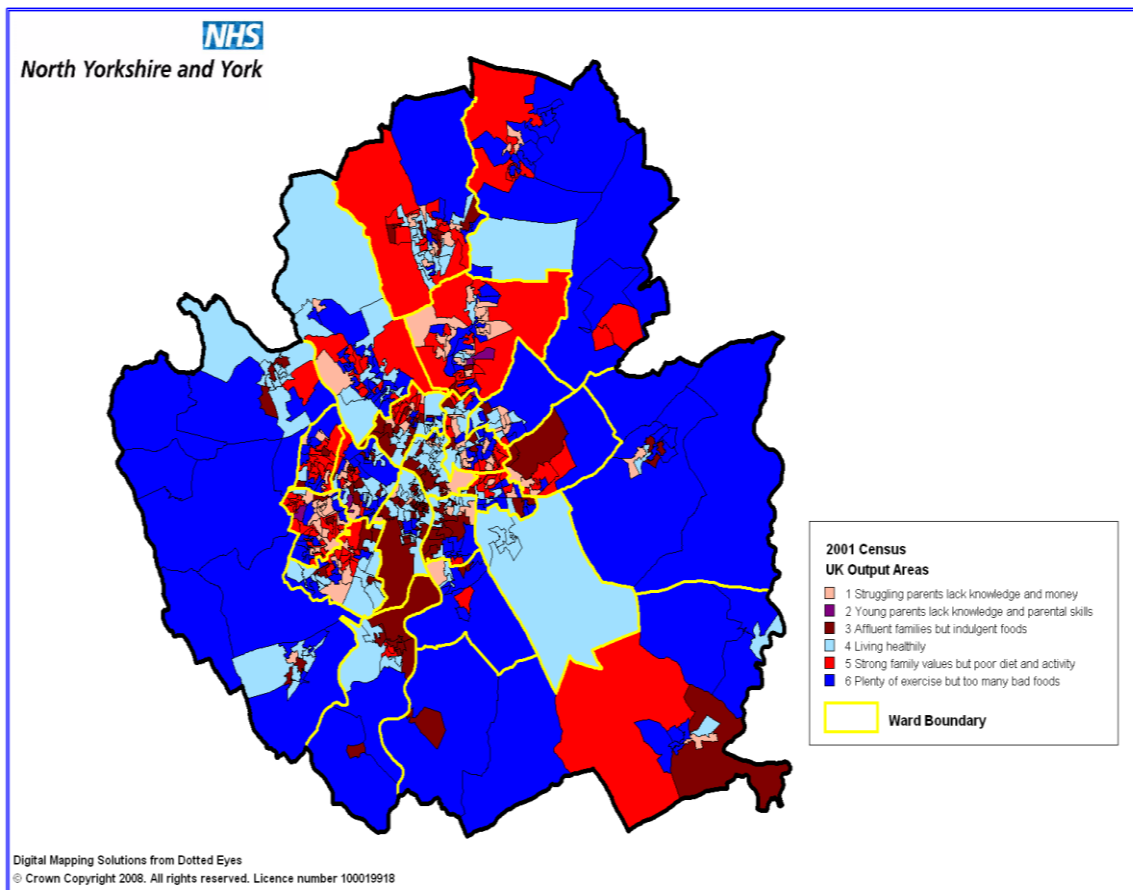

Figure 11 – Modelled Estimates of Families with Children Aged 2-10 in York

Modelled Estimates of Families with Children Aged 2-10 in York			National Sample
Dominant Cluster	Numbe	Percent	Percent
1. Struggling parents lack knowledge and	1,374	11%	13%
2. Young parents lack knowledge and	55	0.4%	11%
3. Affluent families but indulgent food	1,589	12%	13%
4. Living healthily	2,856	22%	21%
5. Strong family values but poor diet and	3,317	26%	27%
6. Plenty of exercise but too many bad foods	3,614	28%	15%
Total	12,805
