

Table of Issues/Findings, Identified Solutions, Possible Impacts & Draft Recommendations

Objectives (i) - Accessibility to Services, Employment, Education & Health Services			
Issue/Findings	Identified Solutions	Possible Impacts	Draft Recommendations
Bus routes meant to be reviewed every five years (now due) but would benefit from more regular reviews to react to changes in the location of services, new businesses and housing developments, etc	Continued close working with the Quality Bus Partnership to encourage improvements in the bus service	Better bus service overall, with increased usage, but possible positive & negative effects in particular localities. Possible alterations in subsidy levels by CYC for socially necessary bus services in York.	
Extending the Park & Ride service would improve access to York Hospital outside of peak hours			
Gaps in bus services would be reduced if the number of buses in use during 'school run' times was increased	Continued close working with the Quality Bus Partnership to encourage improvements in the bus service	Better peak service but potentially substantial additional costs for extra vehicles, and demand for increased subsidy by CYC for the bus services in York.	
Improved safety measures for taxis eg CCTV in Cars would encourage greater use			
Need to publicise good practices by employers across the city i.e. Green Travel Plans	CYC to lead by example i.e. by implementing own Green Travel Plan	Influencing Council staff's travel to work mode, and public and employer attitudes to how the journey to work is undertaken, thereby spreading the benefit and achieving modal shift and reducing peak hours congestion.	
Sustainable Tourism – a tourist tax with monies collected being used in total to deal with accessibility issues			

Identifying under used bus services and implementing soft measures to encourage their use			
Improved interchange points are needed in the city centre			
Additional mapping work would be required over and above that which is already planned as part of LTP2 to show the positive effects on traffic congestion in York of the measures identified as a result of this review	Carry out additional mapping works	Clearer view of accessibility issues in the City, and better focus of future plans (bus services, cycle & walking routes, etc.) on where the most difference can be made. However any additional work would have an impact on staffing resources and other priorities.	
Objectives (ii) - Air Quality - in particular looking at the five hotspots identified in the LTP2			
Issue/Findings	Identified Solutions	Possible Impacts	Draft Recommendations
51-72% of emissions affecting air quality are from vehicles			
The number, type and age of vehicles on York roads is relevant to the levels of pollutants recorded			
There are five technical breach areas within York's city centre: Lawrence Street Fishergate Nunnery Lane Holgate Gillygate			
Fulford Main Street is one area of concern outside of the city centre			

<p>Air Quality threats: Current and future car parking policies</p> <p>Ongoing large scale developments ex York Northwest</p> <p>Proposed changes to CYC staff travel incentives</p> <p>Workplace parking in private sector</p> <p>Climate change policies</p> <p>Changes to local bus fleet</p> <p>Lack of funding</p>			
Objective (iii) - Alternative Environmentally viable and financially practical methods of transport			
Issue/Findings	Identified Solutions	Possible Impacts	Draft Recommendations
Reducing the environmental impact of freight transport in the City.	Provision of a transhipment centre outside the City, thus transferring the environmental impact outside of the city centre where it may be of lesser concern.	Reduction in the number of large delivery vehicles to, from and in the city centre, reducing congestion and air pollution and improving the pedestrian area, but there is significant evidence that it would not be self financing and would require substantial local authority subsidy, and may meet resistance from businesses.	The introduction of a transhipment centre is not a priority at the moment, but is worth examination in the future and should not be dismissed
York has a high level of short commuting trips (56% were less than			
Cycling's share of the travel market in York has remained largely static in recent years	Additional soft measures should be introduced to encourage walking and cycling over and above those initiatives included in LTP2	Should achieve real modal shift and reduction in traffic congestion and air pollution. Impact on resources and budget and other priorities.	

Although buses are not the cleanest vehicles, continuing to try and keep fleets up to date, with low emissions and using optimum fuels is the best way forward	Continued close working with the Quality Bus Partnership to encourage improvements in the bus service	Increased subsidy by CYC for the bus services in York	
Objectives (iv) - CO² Emissions			
Issue/Findings	Identified Solutions	Possible Impacts	Draft Recommendations
York has 10 to 15 exceedences of PM ₁₀ which is well below the government objective of 35 exceedences allowed per year	unless there are major changes in York the levels of PM ₁₀ are at an acceptable level and therefore there is no solution required	n/a	n/a
PM _{2.5} are measured at a national level and not by Local Authorities at present, and therefore there is no record of the level of PM _{2.5} in York.	Officers confirmed that, if required, they could undertake a short term project at minimal cost to measure levels of PM _{2.5} in the city.		
Objectives (v) - Journey Times & Reliability of Public Transport			
Issues/Findings	Identified Solutions	Possible Impact	Draft Recommendations
Timetables need to more closely reflect actual journey times (particularly at peak times) in order to improve the public's perception of bus reliability			
Journey times are affected by delivery vehicles in the city centre			
Not all buses in York are BLISS enabled (cost of installing the BLISS system on a bus route is in the region of £10k)			

Changes to Park & Ride Services should be made clearer to the public			
Relative cheapness of the Park & Ride fares relative to local bus services creates a perverse incentive for local residents to drive to Park & Ride sites			
Traffic flow is 8-10% lower during school holidays, making a significant difference to reliability			
There are still a number of buses in operation that are not DDA compliant			
Not all bus stops have timetables and shelters thus reducing the attractiveness of the bus package			
Dwell time, cross town ticketing issues, congestion and money in the capital programme all lead to bus service unreliability			
Identifying bottlenecks and re-locating bus stops would help to reduce congestion and improve bus reliability			
Objectives (vi) - Economic Performance			
Findings	Identified Solutions	Possible Impact	Draft Recommendations

Objectives (vii) - Quality of Life Findings	Identified Solutions	Possible Impact	Draft Recommendations
Objectives (viii) - Road Safety Findings	Identified Solutions	Possible Impact	Draft Recommendations
