Potential Scrutiny Reviews

- **Partnership Working – Hospital Discharges:** To examine the relationship between Social Services, Ambulance Services and the hospital, and how this potentially affects the hospital meeting its targets.
- **IAPT (Improving Access to Psychological Therapies):** To examine York’s IAPT performance in terms of access and waiting times and to look at ways of opening up access through the voluntary sector and other providers.

- **Personalisation:** To revisit the topic of Personalisation with a refined remit looking at how resources can be disinvested before they can be reinvested, particularly in relation to mental health services and commissioning as contracts are being reviewed. The learning from this more focused review to be shared across all personalisation services.
- **DTOC (Delayed Transfer of Care):** To investigate the reasons why a high number of people who are ready to leave hospital are not discharged on time due to a lack of community care facilities and identify the problems faced by those providing health and social care services in the city including the Council and the NHS.
- **Safeguarding** – A possible review of Multi-Agency Safeguarding Hubs to ensure that social workers and the other agencies involved are working together effectively and efficiently to protect vulnerable adults.
- **Neurology Services:** A possible review of neurological services after concern was expressed by a member at the April 2014 Health OSC meeting that there was no longer a ward at York Hospital to treat patients with multiple sclerosis (MS), Parkinson's Disease, epilepsy etc.
