	capital investment decisions – Council Tax Shows the actual impact of capital investment decisions on council tax. The impact on council tax is a fundamental indicator of affordability for the Council to consider when setting forward plans. The figure relates to how much of the increase in council tax is used in financing the capital programme and any related revenue implications that flow from it. 6a	Authorised Limit for External Debt The authorised limit is a level set above the operational boundary in acceptance that the operational boundary may well be breached because of cash flows. It represents an absolute maximum level of debt that could be sustained for only a short period of time. The council sets an operational boundary for its total external debt, gross of investments, separately identifying borrowing from other long-term liabilities for 3 financial years. 6b	Operational Boundary for external debt The operational boundary is a measure of the most likely, prudent, level of debt. It takes account of risk management and analysis to arrive at the maximum level of debt projected as part of this prudent assessment. It is a means by which the authority manages its external debt to ensure that it remains within the self-imposed authority limit. It is a direct link between the Council's plans for capital expenditure; our estimates of the capital financing requirement; and estimated operational cash flow for the year. Upper limit for total principal sums invested for over 364 days The Council sets an upper limit for each forward financial year period for the level of investments that mature in over 364 days. These limits reduce the liquidity and interest rate risk associated with investing for more than one year. The limits are set as a percentage of the average balances of the investment portfolio.		£0	£0	£0	£0	£0	£0

To minimise the impact of debt maturity on the cash flow of the Council. Over exposure to debt maturity in any one year could mean that the Council has insufficient liquidity to meet its repayment liabilities, and as a result could be exposed to risk of interest rate fluctuations in the future where loans are maturing. The Council therefore sets limits whereby long-term loans mature in different periods thus spreading the risk.
